

EPA Media Release

High level Hazelwood open cut mine fire smoke advisory

0900 Sunday 02 March 2014

EPA Victoria has issued a high level smoke alert for the Latrobe Valley today (Sunday) as a result of the Hazelwood open cut mine fire.

A high level alert means that it is likely residents will see ongoing smoke impacts overnight to Sunday morning, with visibility less than 10 kilometres due to high particle concentrations in the air.

The Victorian Chief Health Officer Dr Rosemary Lester advises that excessive smoke levels can not only aggravate existing heart or lung conditions, but may also cause members of the community to experience irritated eyes, coughing or wheezing.

“Everyone should avoid prolonged or heavy physical activity and keep informed about fire activity in their immediate area,” Dr Lester said.

“Anyone with a heart or lung condition should take their medication as prescribed by their doctor.

“People with asthma should follow their asthma management plan.

“Anyone with concerns about their health should seek medical advice or call NURSE-ON-CALL on 1300 60 60 24.”
