

# Gippsland Regional Strategic Fire Management Plan 2013 – 2023

Version 2.0  
30 June 2013

Internal Version – Not For Public Viewing

This page intentionally left blank

DRAFT

## ***Chairman's Foreword***

I am pleased to be able to present this second version of the Gippsland Regional Strategic Fire Management Plan (RSFMP). On behalf of the Regional committee, the production of this plan has been consistent with principles outlined in the Integrated Fire Management Planning Framework (2007) and the State Fire Management Strategy (2009).

This plan is the result of extensive collaboration between government agencies, land managers and infrastructure operators throughout Gippsland. The key has been the commitment demonstrated by representatives on the Regional committee to improve planning and, hence, community outcomes from the occurrence of fire in the Gippsland region both planned and unplanned.

Communities, agencies and businesses have a strong history of working together during the unfortunately frequent natural disasters that have confronted the people of Gippsland. This plan aims to recognise and build on existing relationships and planning. It will also form the basis for consistent planning at a municipal level and inform the State committee of significant fire related issues and initiatives for consideration at state level.

I would like to personally thank all those who have contributed to the production of this plan and those who have been willing to commit their time and considerable expertise, both as members of the Regional committee and as experts in their field.

Mark Potter  
Chair  
Gippsland Regional Strategic Fire  
Management Planning Committee

**NOTE!**

This plan contains information which may be confidential and privileged, and is intended to guide and inform Emergency Management planning within Gippsland and adjoining regions only.

The Gippsland RSFMPC has made every effort to ensure the accuracy of the information contained within this plan. Any inaccuracies or omissions should be notified to:

David Johnson  
 Fire Planning Network Manager, Gippsland Region  
 P.O. Box 9067

## Authorisation

In accordance with the IFMP framework, this document has been prepared by the Gippsland Regional Strategic Fire Management Planning Committee. The agencies and organisations represented on the committee have participated in this process and reached this agreed position regarding the identification and prioritisation of assets and risk in relation to bushfire in the Gippsland region. The information contained within this document will be considered by these participants when developing individual agency and organisational plans in relation to fire management. It will also be provided to Municipal Fire Management Planning Committees to inform the development of municipal fire management plans.

This plan was adopted through a formal motion by the membership of the Gippsland Regional Strategic Fire Management Planning Committee, at their meeting, for submission to the State Fire Management Planning Committee for endorsement.

## Part 1 – Introduction

### Introduction to Fire Management

Reducing Victoria's fire risk is a priority for the Victorian State<sup>1</sup> and Local Governments and for those agencies that have legislated responsibilities for land, infrastructure and fire management.

In Gippsland we live in a bushfire prone environment dictated by our climate of wet winters and hot dry summers. Fire management planning needs to take into account both the negative effects of unplanned fire on communities and the need for planned fire in the landscape to ensure positive environmental outcomes, as bushfires are a vital part of our natural environment, driving regeneration and maintaining the health of species and ecosystems.

The last decade has seen Gippsland experience some of the worst bushfires in Australia's history with the 2003 Alpine, 2006/07 Great Divide and Coopers Creek fires, the 2009 Delburn Complex and Churchill fires and the 2013 Aberfeldy-Donnelly's and Alpine South fires impacting significant tracts of land and public and private assets with loss of life in both the Delburn/Churchill and Aberfeldy-Donnelly's fires. In addition fires at Wilsons Promontory in 2005 and 2009, the 2006 Moondarra fire and 2011 Tostaree fires have all caused significant disruption to communities in and around Gippsland.

Gippsland is also home too much of the State's major infrastructure including the coal mines and power stations of the Latrobe Valley, the Longford gas plant, ESSO's Barry Beach Terminal and the Thomson Dam catchment and related infrastructure.

This Gippsland Regional Strategic Fire Management Plan (RSFMP) considers the impact of fire on major State and regional assets and has been developed, using principles outlined in The IFMP Framework<sup>2</sup>, including a systematic approach to identifying assets at risk, levels of risk and the development of risk mitigation strategies.

This plan is informed by State Fire Management Planning Strategies and priorities and, in turn informs and is informed, by Municipal Fire Management Plans (MFMP's).

### Authority for the Plan

This Gippsland RSFMP has been produced by and with the authority of the Gippsland RSFMPC pursuant to Part 5 Section 5.11 of the *Emergency Management Act 1986*<sup>3</sup> and Section 53 of the *Country Fire Authority Act 1958*<sup>4</sup>.

### Period of the Plan

This plan takes a long term, strategic view of current and developing issues which are likely to impact the frequency and consequences of fire events throughout Gippsland. It considers strategies to minimise the impact of fire emergencies on Gippsland communities and informs agency and municipal planning. This plan is regularly reviewed to take into account changed circumstances and government policies. Such reviews are to be comprehensive and are intended to extend the life of the plan to maintain a ten year strategic view.

<sup>2</sup> [Framework](#)

<sup>3</sup> [Office of the Emergency Services Commissioner - Emergency Management Manual Victoria](#)

<sup>4</sup> [COUNTRY FIRE AUTHORITY ACT 1958](#)

## Plan Preparation Process

This plan has been prepared by the RSFMPC, through consultation and collaboration with key regional stakeholders. RSFMPC member agencies have supported the development of this plan through the provision of information, specialist expertise and by championing regional planning within their agencies and with their agency stakeholders.

This RSFMP:

- Identifies general trends and issues that impact on fire management within Gippsland.
- Identifies specific assets at risk of a regional or higher significance.
- Recommends generic treatments.
- Provides for a common understanding of risk and fire management strategies.
- Enables Municipal<sup>5</sup> and agency plans to align with State and regional strategic directions.
- Informs and is informed by the six Gippsland Municipal Fire Management Plans (MFMP's)
- Informs and is informed by the State Fire Management Planning Committee.
- Covers both Public and Private land.
- Recognises the importance of planned burning for ecological as well as community protection outcomes.

Informs and is informed by the six Gippsland Municipal Fire Management Plans

<sup>5</sup> Refers to the geographical footprint

## Part 2 – Environmental Scan

The Gippsland RSFMP has used the Regional Development Victoria document *Gippsland Regional Plan (GRP)* as the main source of the ‘environmental scan’ for the RSFMP. The GRP was developed by the Gippsland Regional Project Control Group with members drawn from the Gippsland Local Government Network (GLGN), the Gippsland Regional Managers Forum and representatives from Regional Development Australia (RDA). The GLGN is responsible for the maintenance of the GRP, a copy of which can be sourced from the new interactive [Gippsland Regional Plan Website](#). The environmental scan was updated in 2013 using Australian Bureau of Statistics (ABS) data from the 2011 Census and the Gippsland Regional Growth Plan 2012 [Gippsland Regional Growth Plan](#).

### Gippsland Population and Demographics

In 2011 the regional population was 255,819<sup>6</sup> and this figure is projected to grow to 305,722 by 2026<sup>7</sup>. Much of this growth is due to movement into the region from Melbourne, including a significant number of retirees. It is expected that more than 27.6 % of the population will be aged over 65 by 2026<sup>8</sup>.

All local government areas (LGAs) will experience growth in the period through to 2026 with Bass Coast and Baw Baw being the fastest growing municipalities.

Individual and household incomes are lower in Gippsland than regional Victorian averages.

Significantly, almost all major centres within the Gippsland region have highly disadvantaged communities.

Much of Gippsland’s population is located around the road and rail transport corridors of the Latrobe Valley from Drouin and Warragul in the west, through to Bairnsdale and Lakes Entrance in the east. This corridor holds much of the regions manufacturing and processing industry as well as state energy infrastructure. Leongatha, Korumburra and Wonthaggi are population hubs in the south of the region along with the townships on Phillip Island. These southern townships mainly provide services to the dairy industry and the growing tourism industry along the coast.

Most of the region’s population lives in the Latrobe City (Moe, Morwell, Traralgon cluster) and is the fourth largest population in regional Victoria and the largest population in the Gippsland region. Other major population centres are Warragul/Drouin, Sale, Bairnsdale, Wonthaggi, Leongatha and towns close to these centres. Around 27.6 %<sup>9</sup> of the regional population is located in villages and settlements of less than 1,000 people.

<sup>6</sup> Population figure based on “Usual Residence”

<sup>7</sup> [Gippsland Regional Plan | Gippsland region](#)

<sup>8</sup> [3235.0 - Population by Age and Sex, Regions of Australia, 2011](#)

<sup>9</sup> The percentage of Regional population located in villages and settlements has changed significantly since 2006 however this is due in the main to the ABS completely overhauling their geographic boundaries for the 2011 Census and beyond. Hence the new 2011 town boundaries, or *Urban Centre or Locality (UCLs)*, do not match the old 2006 Census boundaries. In some cases town boundaries have been increased or decreased and in some cases new towns declared. Unfortunately trying to measure change, in particular urbanisation is not possible at the present with ABS still to develop a satisfactory method for comparing over time.

Much of the recent growth has been in the region's southwest from Warragul through to Wonthaggi and parts of South Gippsland. This is largely driven by a commuting population who work in the Melbourne metropolitan area, creating a significant urban-rural Interface development challenge.

The region includes significant areas of public land covering some 40% of the land mass along with major water catchments, extensive coastline, coal, oil and gas reserves as well as large areas of high to very high value agricultural land. Public land includes some of Victoria's flagship biodiversity assets such as the Gippsland Lakes, Wilsons Promontory, the Strzelecki Ranges, Far East Gippsland and the Alpine country. Many areas within Gippsland are subject to significant seasonal population peaks which often coincide with times of the highest bushfire risk.

## Gippsland Economy

Gippsland Gross Regional Product is estimated at \$12.963 billion<sup>10</sup>. Key industries essential to the viability of the Victorian economy include electricity generation, oil and gas production, water supply and forest products.

Gippsland's regional economy is dominated by a few key sectors: manufacturing; construction; mining; agriculture, forestry and fishing; and electricity, gas and water supply. The widest impact on the Gippsland economy will be influenced by changes in growth or contraction in these sectors.

Gippsland's economy is also strongly dependent on the tourism and service sectors, which can be severely impacted during significant fire events. Difficulty exists in reconciling conflict between these sectors and land managers in relation to the timing of planned burns which can impact on tourism numbers in many locations.

Projections for economic growth in the Gippsland region are hampered by a fall in income associated with the aging of the community in general and the workforce particularly.

## Gippsland Economic Infrastructure

The Gippsland region contains infrastructure assets of state and national importance, including:

- The Latrobe Valley's electricity generation, transmission and distribution networks.
- Gas production and support facilities at Longford and Barry Beach.
- Water catchments and storage which supply 60% of Melbourne's water, with the construction of the desalination plant near Wonthaggi expected to further secure state water supplies.
- The major transport corridor from the regions west through to the NSW border, which includes both road and rail infrastructure and runs through the Latrobe Valley industrial centre.
- Monash University, Churchill campus which provides education services nationally and internationally.
- Maryvale Paper Mill
- Plantations in the Strzelecki Ranges and elsewhere throughout the Gippsland region.

---

<sup>10</sup> [Gippsland Regional Plan | Gippsland economy](#)

## Gippsland Workforce

The Gippsland regional workforce is highly represented with managers, technicians, trade workers and labourers, and is under-represented with professionals, clerical and administrative workers.

The workforce has lower income levels compared to state and national benchmarks; however, more recently there has been significant growth in relatively well-paid occupations.

The workforce is also significantly older than state and national averages, which indicates the possibility of labour shortages over the next 10 to 15 years.

The region has a lower level of educational attainment, with respect to undergraduate education against state and national benchmarks, and has the second lowest level of engagement in university study across all regions in Victoria.

## Gippsland Natural Resources

Gippsland's natural resources are critical to the wellbeing of the regional economy as they provide the basis for electricity generation, mining, agricultural and forestry production and tourism.

Gippsland's public land is important to the state for its biodiversity values and includes some of Victoria's flagship biodiversity assets including the Gippsland Lakes, Wilsons Promontory, the Strzelecki Ranges, Far East Gippsland and the Alpine country. The Great Alpine Road is a key tourist corridor to the Alps and North East Victoria.

There are two key areas which are considered important bio-links for the region's environmental health:

- Between the Alps and the Gippsland Lakes, and
- Wilson's Promontory through to the Strzelecki Ranges.

The region receives higher rainfall compared with most parts of south eastern Australia and has significant water resources within its seven major river basins. A long period of below average rainfall in the decade through to 2010 has been followed by nearer to average rains in parts of the region, with a series of local flood events occurring throughout 2011 and 2012.

Approximately 16% of the world's reserves of brown coal exist within the Latrobe Valley, which has been central to Victoria's power generation for the last century. Gippsland also supplies natural gas to the national distribution network and supplies 20% of Australia's demand for crude oil.

National  
Park

## Gippsland Health and Wellbeing

The average life expectancy of Gippsland people is lower than the Victorian average and, on some indicators; the region has the worst health outcomes in the state.

Mental health disorders, chronic respiratory, cardiovascular disease along with cancers are highly prevalent among the causes of death and disability within the region.

A history of major natural disasters, from floods to fires in recent years, has added to the disadvantage of some communities.

Gippsland has an extensive network of health service providers including hospitals and community health services. However, access to health services is variable across the region with a number of LGA's not meeting state benchmarks.

Since the 2009 Black Saturday fires, a number of Gippsland communities have actively engaged in community emergency planning processes. There is some evidence that those communities have developed higher levels of capacity and resilience; however processes have been inconsistent and have demonstrated varying levels of understanding of risk and of agency capacity.

## Gippsland Connectivity

Gippsland has a wide range of public transport services; however there is still a need for more services and upgrades. A number of public transport and freight plans are under development including bus services, rail and infrastructure improvements. In addition, many roads are in need of significant improvement including local roads to facilitate tourism in the region and improve access to markets for local producers and other businesses.

## Bushfire History

Fire is a natural part of the Victorian environment. The flora and topography in Victoria renders it one of the most bushfire prone areas in the world having a recorded history of major fires since 1851.

Bushfires are extremely costly, both in human lives and financially. Since 1939, 456<sup>11</sup> people have lost their lives with thousands injured in major bushfires across Victoria. In dollar terms, the cost of many early fires was not recorded however, as an example; the 2009 Victorian fires cost an estimated \$1.07 billion<sup>12</sup>.

In the period 2003 to 2013, the Gippsland region has been particularly hard hit by major bushfires due to a long period of drought.

A more detailed Gippsland regional fire history can be viewed at **Attachment G**, including a map of the Gippsland region showing areas burnt by major bushfires since 2000.

<sup>12</sup> [Australian Emergency Management Knowledge Hub](#)

## Regional Priorities

For the 10 year life of this Plan, the RSFMPC has determined the following regional priorities:

- Protection of life.
- Protection of State/ regional infrastructure and assets.
- Improved community resilience and community education participation, in line with the State Governments Bushfire Safety Policy Framework<sup>13</sup>.
- Maintenance of major transport routes prior, during and after a fire incident.
- Maintenance of essential services prior, during and after a fire incident.
- Building and enhancing the capacity of regional emergency services.
- Information sharing between agencies.
- Integrated agency planned burning across all land tenures.

Loch Sport Emergency  
Siren Exercise April 2013,  
Wellington Shire.

## Implications for Future Fire Management

Analysis of the GRP has been carried out to establish implications for future fire management and the establishment of 'broader fire management strategies' contained in **Part 5 – Fire Management Risk Strategies**.

<sup>13</sup> [Bushfire Safety Policy Framework](#)

## Part 3 – Regional Fire Management Objectives

This plan aims to:

- Inform Gippsland municipal and agency planning.
- Provide strategies to minimise the impacts of fire (planned and unplanned) on Gippsland communities.
- Identify risks that exist across agency and landscape boundaries.
- Enable a whole of landscape approach to fire planning.

### Plan Objectives

The RSFMP objectives listed below have been grouped into the 'Key Themes' from the State Fire Management Strategy 2009, see **Attachment C**.

### Planning together

The Gippsland RSFMPC will:

1. Consist of appropriate representatives from government and other agencies as outlined in the IFMP framework, will meet at least quarterly.
2. Will establish specialist working groups for the purpose of progressing strategies and initiatives outlined in this plan or for other purposes as may arrive.
  - a. These working groups will have their own Terms of References and will determine their own schedules and timelines.
3. Support the development of draft MFMP's for each Gippsland municipality.

### Implementing collaboratively

4. Member agencies of the Gippsland RSFMPC will actively support the municipal planning process through the provision of appropriate staff, expertise and information.
5. Member agencies of the Gippsland RSFMPC will contribute to the delivery of agreed works and treatments through inclusion in their agency business plans.
6. The RSFMPC will evaluate and monitor planning arrangements across municipal boundaries and will provide expert advice and assistance to ensure a seamless approach to fire planning across the region.
7. The RSFMPC will work with adjoining regions and the NSW fire services to ensure a seamless approach to fire management.

## Building Knowledge

The Gippsland RSFMPC will review:

8. Regional risks annually and provide any amendments to relevant MFMP's for consideration.
9. The RSFMP for currency annually, after a major incident or after significant changes to the environment, agency composition, responsibilities, or regional infrastructure.

## Building Capability

10. Member agencies will actively seek opportunities for multi-agency collaboration to improve outcomes for communities and reduce duplication and agency workloads.

## Using Fire

The RSFMPC will:

11. Actively encourage the use of planned fire to achieve positive community safety and ecological outcomes.
12. Work with fire agencies, in the development of policies and strategies aimed at improving fire management on private land, for ecological as well as community safety purposes and to achieve integration of complementary works on private and public land.

## Outcomes

### Short Term Outcomes 1 – 2 years

- RSFMPC meetings held at least quarterly.
- Produce the first iteration of the Gippsland RSFMP to address bushfire risk. Review the first iterations of the six Gippsland MFMP's.
- Review the Gippsland RSFMP and produce the second iteration of the Gippsland RSFMP to include the risk of structural and chemical fire.

### Medium Term Outcomes 3 – 5 years

- RSFMPC meetings held quarterly.
- RSFMP and MFMP's Reviewed annually or as required.
- Plans address all fire risk and uses.
- Agencies using RSFMP to inform their business planning

### Long Term Outcomes 6 – 10 years

- Cross border/boundary plans informed by RSFMP.
- Carry out major review of RSFMP and ensure alignment with broader emergency management planning.

## Strategic Directions

- Focus on the preservation of life as a priority.
- Create a planning environment in Gippsland which encompasses a whole of landscape approach to the management of fire, both planned and unplanned.
- Encourage the use of fire for ecological, as well as community safety outcomes across the landscape.
- Seek out efficiencies, both physical and financial, through collaboratively planning for service delivery.
- Strive for best practice outcomes through continual improvement.

## Links to other Plans

As a strategic document, this plan is informed by a number of existing State, regional and agency plans. This plan, in turn, informs a number of other plans including at State, regional, municipal and local levels. It also informs agency business planning. These plans are documented in **Attachment F**.

On-site roadside vegetation management planning meeting: CFA, VicRoads and East Gippsland Shire ensuring individual organisational plans align through collaboratively planning for efficient service delivery.

## Part 4 – Engagement and Communications

### *RSFMP Engagement and Communications Plan*

The Gippsland RSFMP sits as an overarching document to the six Gippsland MFMPs. The RSFMP generates a common understanding and shared purpose, with regard to fire management, and ensures Municipal plans and individual agency/organisation plans are linked to the regional strategic direction and are consistent across regional boundaries.

Consultation for this RSFMP has been through RSFMPC member agencies and organisations who in turn have consulted with their constituents/stakeholders where appropriate.

Significant stakeholder analysis has been carried out to identify relevant regional stakeholders and to establish their level of participation in the Gippsland regional planning process. Information gathered includes:

- Agency/Organisation description and responsibilities.
- Agency/Organisation stakeholders and communications strategies.
- Agency/Organisational exposures and risks.

Stakeholders fall into one of three categories based on their level of interest/influence in the regional planning process:

- **Primary** - Agencies/organisations with a fire response or land management role.
- **Secondary** - Agencies/organisations with a supporting role in fire management and major infrastructure owners/operators.
- **Tertiary** - Other agencies/organisations that have an interest in fire management.

Communication strategies have been established for each level of stakeholder and are outlined in **Attachment D - Engagement and Communications Plan**.

## Part 5 – Fire Management Risk Strategies

### *Regional Asset Identification Criteria*

The Gippsland RSFMPC risk working group has established criteria for the identification of regional assets<sup>14</sup> at risk, to identify those assets and to investigate existing treatments and their effectiveness.

The following criteria were developed to identify if an asset at risk is of regional, State or National consequence and should therefore be included in planning at the regional level.

- Has the risk been identified as a State level risk? (If so, it is expected that it should be considered at a regional planning level as well as at municipal level for application of appropriate treatments).
- Will the loss of the asset require movement of people to another municipality, or provision of resources/services from outside of the municipality in which the asset is located?
- Would the loss of the asset have a significant economic impact on communities and/or businesses located outside of the municipality in which the asset is located?
  - Would the loss of the asset impact on the delivery of communications outside of the municipality in which the asset is located?
  - Would the loss of the asset impact on the delivery of energy (oil, gas, electricity) outside of the municipality in which the asset is located?
  - Would the loss of the asset have a significant impact on the transportation of goods or provision of services (includes manufacturing and processing) originating or delivered outside of the municipality in which the asset is located?
  - Is the asset an iconic tourism destination?
- Is the asset contained on a recognised national or state register of significance?

Regionally significant assets at risk, existing and suggested treatments are identified in Attachment A - Regional Register of Assets at Risk.

<sup>14</sup> At risk communities will generally be identified at a municipal level, however community types i.e. isolated settlements, may be identified as part of the RSFMP.

## Risk Management Strategies

The following nine risk management strategies have been developed to address the risks identified in the 'Regional Register of Assets at Risk'. A process was used which evaluated existing treatments, determined residual risk and where that risk remained unacceptable, recommended and prioritised additional treatments:

1. Development of a shared understanding of seasonal risk, to enable consistent and complimentary messaging to communities and other stakeholders.
2. Site and locally specific planning to be undertaken under the auspices of MFMP's and all resulting plans to be contained as sub plans within MFMP's.
3. Potential fire risk to be considered when making land use planning decisions or making amendments to planning schemes.
4. Isolated small communities to be given due consideration during municipal and agency planning, regionally agreed strategies to be developed for the protection of life in these communities.
5. Regionally agreed minimum standards to be established for the treatment of settlement types across Gippsland.
6. Plantation management plans in place for significant plantations in Gippsland, treatments included in MFMP's.
7. Critical roads and related infrastructure identified across Gippsland and appropriate treatments identified in MFMP's.
8. Triggers for response (including community information and action) to be identified and articulated in relevant organisational plans.
9. Major infrastructure assets identified and effectiveness of relevant Emergency Management Plans validated and interagency linkages tested.

These strategies, together with the responsible agency or group and timelines, are contained in the table on page 24.

Multi-agency emergency exercise, Noojee, Baw Baw Shire.

## **Broader Fire Management Strategies**

The following broader fire management strategies have been developed from the Gippsland Regional Plan (GRP) which provides this plans environmental scan, and from which future implications for fire management have been derived. The GRP identifies a number of regional strategies which have fire management implications on which the following fire management strategies are based. Detail of the alignment of these fire management strategies with the GRP are contained in **Attachment B**.

10. Fire and land management agencies to actively participate in the development of growth strategies for key regional centres. Agency representation will provide expertise to enable environmental and community safety outcomes to be considered, in addition participation will allow agencies to identify future community needs, along with resultant impacts on agency capacity and the environment for consideration during the agency business planning process.
11. Agencies to monitor the development of strategic priorities for the support of an aging community. During agency business planning consideration should be given to:
  - The potential for less prepared communities, with a reduced capacity, to successfully defend properties.
  - Potential for increased concentrations of less mobile people.
  - Reduced capacity to recover.
  - Potential conflicts between individuals who have a community service role during an emergency (including carers), and their personal needs to defend their homes, care for their families or contribute to emergency response efforts to be taken into account as part of business continuity planning.
12. The RSFMPC to agree and document a position on climate change and its potential impact on Gippsland's fire regime, including resultant environmental stressors.
13. Fire management plans to include strategies for:
  - Ensuring continued access in and out of major regional centres, to enable community safety and sustainability e.g. access to food, medical treatment, schools, municipal services, etc.
  - Protection of water supply infrastructure and catchments.
  - Minimising disruption to the operation of key infrastructure assets and services.
  - Minimising disruption to the availability of the regions resources and impact on the region's economy.
14. Fire and land management agencies to participate in the development of comprehensive planning frameworks for the regions flagship bio-diversity assets. Agencies to provide expertise on community safety and environmental sustainability matters.

15. Fire management planning committees to:

- Identify key environmental and agricultural assets.
- Ensure the establishment of emergency response plans which give due consideration to the health and biodiversity of eco systems and the protection of productive land.
- Take into account the establishment of key bio-links and to include appropriate land management objectives and response planning to ensure their continued viability.

16. The RSFMPC to provide advice to fire management planning committees to inform the development of consistent policies and processes for community consultation during the establishment of fire management plans.

17. The RSFMPC to develop a position on the format and process for the establishment of community based emergency action plans which takes into account any direction provided by the SFMPC.

Heyfield Bushfire (Aberfeldy - Donnelly's fire) Recovery

## Strategies for planning across boundaries

| State                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Regional                                                                                                                                                                                                                                                                                                                                                                                                    | LGA                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Cross border arrangements already exist with NSW for the response to emergency events, especially fire. Regular multi-agency forums are held to plan and test existing arrangements. The RSFMPC will build on these existing arrangements to ensure the sharing of information, alignment of spatial data sets, coordination of resources and communications and any other broader spectrum fire management issues likely to impact on both sides of the border.</p> | <p>The RSFMPC will distribute copies of the regional plan to adjoining regional committees for comment. Specific feedback will be sought on cross border assets (including the unique case for French Island), risks and treatments to ensure alignment and interoperability. The RSFMPC will hold joint workshops to address specific cross boundary issues and to ensure agreement on common actions.</p> | <p>The RSFMPC will produce a RSFMP which informs, and is informed by the municipal planning process. The RSFMP will also identify those assets at risk which need to be planned for across municipal boundaries. The RSFMPC will monitor the development of MFMP's and provide appropriate guidance and expertise to ensure cross boundary risks are satisfactorily addressed.</p> |

### Planning for French Island

French Island (FI) sits within the Gippsland fairer Victoria region, and as such is the responsibility of the Gippsland RSFMPC. However due to unique geographic location and governmental structure it is generally agreed it is more appropriate that fire management planning is undertaken under the auspices of the Southern Region RSFMPC, particularly as:

- FI does not sit within any Victorian local government area<sup>15</sup>.
- Most government agencies manage FI from within the Southern region for their daily business.
- Travel to FI is largely undertaken from the Mornington Peninsula.
- Emergency response is generally managed from within Southern Region.

An Integrated Fire Management Plan MOU has been agreed between the Gippsland and Southern regions and is included at Attachment J.

<sup>15</sup> Refer Attachment E, Map 2

| Strategy | Deliverable                                                                                                                                                                                                                                                                            | Responsible agency/group                               | Short term 1-2 years                                                                                                                                                                                                                                                                                                                                                                                                                 | Medium term 3-5 years                                                                                                                                                                                                                                                                                                                                                                                                                                          | Long term 6-10 years                                                                                                           |

## Part 6 – Plan Reporting and Review Process

The Gippsland Regional Strategic Fire Management Planning Committee (RSFMPC) is the custodian of the Gippsland Regional Strategic Fire Management Plan (RSFMP). As such, its members are responsible for developing, maintaining and reviewing the RSFMP. Organisations represented on the RSFMPC must be accountable for their respective activities, responsibilities and components within the RSFMP.

In accordance with State Fire Management Planning principles this RSFMP has a ten year “rolling” planning cycle and is to be monitored and reviewed annually or after a major fire incident.

The Chair, on behalf of the RSFMPC, will report quarterly to the State Fire Management Planning Committee which will in turn report relevant information to the Chair.

The Chair on behalf of the RSFMPC will report annually on the outcomes of the review process to the organisations represented on the RSFMPC. Organisations will use these reports to inform their organisational business and works planning in relation Fire Management activities.

**The annual RSFMP review is not limited to but will include an evaluation of:**

- Any changes to the environmental scan information contained in the Gippsland Regional Plan.
- The currency and accuracy of the Regional Register of Assets at Risk.
- Changes to State strategies or priorities.
- Information contained in MFMPs. Anything in MFMP to go in this plan

**In addition the RSFMPC, under its Terms of Reference, has a responsibility to:**

- Oversee municipal fire management planning within the Gippsland region.
- Ensure that municipal area plans are linked to the regional strategic direction and are consistent across boundaries.
- Monitor and review the implementation of fire management plans and treatments within each of the municipal areas within the Gippsland region.
- Ensure that a consistent stakeholder/community engagement process is in place during planning at the regional and municipal level.

| National<br>(Catastrophic) | State health and support systems (e.g., for displaced people) unable to cope. General. State support system unable to cope. | 50+ lives lost.<br>Hundreds injured<br>1000+ houses destroyed.<br>2000+ people displaced.<br>30,000 + 10,000 livestock lost.                                                                            | Critical failure of impacts on communities functioning over a large area for an extended period.                                                                                                                | Loss of critical infrastructure and/or services for 24-48 hours to the Melbourne metropolitan area.                                                                                                             | Loss of public confidence in the states ability to manage. Policy goal abandoned.                                      | Significant state-wide outrage. Royal Commission or other similar inquiry leading to changes in policy and practice.                      | Very serious long term impairment of loss of ecosystem function. | Permanent total loss of one or more ecosystems or critical habitat elements. Loss of nationally significant cultural assets.                                                                                                                                                                 | \$1B, Significant widespread disruption to at least one industry sector.             | \$1B or 30% of State revenue                                                                                                           |
| State<br>(Major)           | Health and support systems at surge capacity, but within capacity of state.                                                 | 10 fatalities as a direct result of the bushfire event.<br>300+ houses destroyed.<br>500+ people displaced.<br>30,000 - 10,000 livestock lost.<br>Significant loss of breeding stock.                   | Critical failure impacts on communities functioning over a medium to large area for a medium period.                                                                                                            | Loss of critical infrastructure and/or services for up to 8-16 hours to the Melbourne metropolitan area.<br>Loss of services to a major regional city/several suburbs for up to 1 week.                         | States capacity for normal activity is perceived as impaired. Significant diversion from a public policy goal/program. | Significant regional and local outrage, with some occurring at state level. Parliamentary or other inquiry leading to change in practice. | Serious medium term impairment of ecosystem function.            | Permanent partial loss of one or more ecosystems or critical habitat elements. Extinction of a species or significantly increase the likelihood of extinction to almost certain that intervention such as captive breeding programs are required. Loss of state significant cultural assets. | Economic costs and losses exceed \$300m. Disruption to at least one industry sector. | Damage costs including legal actions and/or industry impacts (tourism, forestry, wine and grape etc) to the value of more than \$300M. |
| Regional<br>(Serious)      | Health and support system at optimum capacity – within regional capacity.                                                   | 5 fatalities as a direct result of the bushfire event.<br>Large number of people affected by smoke.<br>100+ houses lost.<br>200+ people displaced<br>3000 - 10000 livestock lost.                       | Critical failure impacts on community's functioning over a small area for a short period.                                                                                                                       | Loss of critical infrastructure and/or services for up to 2-5 hours to the Melbourne metropolitan area.<br>Loss of services to a major regional city/several suburbs for 3-4 days.                              | State perceived as being able to continue business despite disruption.                                                 | Some outrage at local and regional level.                                                                                                 | Minor to moderate impairment of ecosystem function.              | Long term disturbance to one or more ecosystems or critical habitat elements. National response and/or support for animal welfare. Loss of a regionally significant cultural asset such as Phillip Island penguins, Healesville Sanctuary, Puffing Billy.                                    | Costs and losses < 100 M                                                             | Damage costs including legal actions and/or industry impacts (tourism, business etc) to the value of more than \$100M.                 |
| Municipal<br>(Important)   | Local health and support services unable to cope.                                                                           | Single fatality and/or multiple serious injuries requiring hospitalisation as a direct result of the bushfire event.<br>Up to 30 houses lost.<br>50+ people displaced.<br>3,000 + 1,000 livestock lost. | Loss of critical infrastructure and/or services for up to 1 hour to the Melbourne metropolitan area.<br>Loss of services to a major regional city for 1 day.<br>Loss of services to local community for a week. | Loss of critical infrastructure and/or services for up to 1 hour to the Melbourne metropolitan area.<br>Loss of services to a major regional city for 1 day.<br>Loss of services to local community for a week. | Municipal government capacity for normal activity is perceived as impaired.                                            | Local outrage and concern.                                                                                                                |                                                                  | Temporary disturbance to one or more ecosystems or critical habitat elements. Local response and/or support for animal welfare.                                                                                                                                                              | Costs and losses < 30M                                                               | Damage costs including legal actions and/or industry impacts (tourism, business etc) to the value of more than \$30M.                  |

**Table 2: Likelihood criteria**

| Likelihood Level | Description           |
|------------------|-----------------------|
| Almost Certain   | Annually              |
| Likely           | Once in every 3 years |
| Some chance      | Once every 10 years   |
| Unlikely         | Once every 30 years   |
| Rare             | Once every 100 years  |

**Table 3: Risk Level Matrix**

| Likelihood Level | Consequence Level |          |          |              |
|------------------|-------------------|----------|----------|--------------|
|                  | Important         | Serious  | Major    | Catastrophic |
| Almost Certain   | Moderate          | High     | Extreme  | Extreme      |
| Likely           | Moderate          | High     | High     | Extreme      |
| Some Chance      | Low               | Moderate | High     | High         |
| Unlikely         | Low               | Moderate | Moderate | High         |
| Rare             | Low               | Low      | Moderate | Moderate     |

**Table 4: Risk Level for Significance at the various levels of planning**

| Planning Level     | Risk Level    |
|--------------------|---------------|
| State <sup>a</sup> | Extreme       |
| Region             | High          |
| Municipal          | Moderate      |
| Local <sup>b</sup> | Not specified |

Note a: Treatments for risks of State Significance may be contained in Regional or Local plans

Note b: Local Plans may be developed to manage risks of any level of significance, depending upon their special needs including their complexity, extent

## Attachment C - Gippsland RSFMP Alignment to State Objectives

### Gippsland Regional Objectives State Objectives (Summary)

#### Key Theme 1 Planning together

The Gippsland Regional Strategic Fire Management Planning Committee (RSFMPC) will consist of appropriate representatives from government and other agencies. As outlined in the IFMP Framework, the RSFMPC will meet at least quarterly.

To support the development of MFMP's for each Gippsland municipality the Gippsland RSFMPC will:

- Carry out a risk assessment for the Gippsland Region, which identifies State and Regional assets at risk from fire, and provide a list of risks and recommended treatments to Gippsland Municipal Fire Management Planning Committees (MFMP's) for consideration in the development of their plans.
- Ensure each MFMP has access to demographic, climate and population statistics and forecasts for their municipality to assist in the planning process.
- Carry out a stakeholder analysis and develop a communications strategy which takes into account existing channels of communication and the needs of stakeholder groups and the broader community.

#### Key Theme 1 Planning together

State, regional, municipal and local fire management plans will be linked with a common purpose and a consistent assessment of risk. The plans will be prepared in consultation with those most affected and available to all interested parties.

#### Establishment phase

The SFMPC will design and produce documentation for the implementation of an integrated fire management planning system that includes common applications and agreements for:

- The assessment of risk
- Terminology
- Plan format and life cycle
- Community engagement framework
- Data sharing
- Performance monitoring and review
- Audit

#### Implementation phase

State, regional and municipal committees will undertake planning using the IFMP planning system with common assessment tools utilised as part of the system. The SFMPC will complete a risk profile for Victoria.

#### Monitoring and Improvement phase

Committees will apply a continuous improvement process that incorporates measuring the performance of fire management plans against identified standards. Additionally, plans will be audited to review their performance.

## Attachment C - Gippsland RSFMP Alignment to State Objectives

### Gippsland Regional Objectives

#### Key Theme 2

#### Implementing collaboratively

Member agencies of the Gippsland RSFMPC will actively support the municipal planning process through the provision of appropriate staff, expertise and data.

Member agencies of the Gippsland RSFMPC will contribute to the delivery of agreed works and treatments through inclusion in their agency business plans.

The RSFMPC will evaluate and monitor planning arrangements across municipal boundaries and will provide expert advice and assistance to ensure a seamless approach to fire planning across the Region.

The RSFMPC will work with adjoining regions and the NSW fire services to ensure a seamless approach to fire management across boundaries.

### State Objectives (Summary)

#### Key Theme 2

#### Implementing collaboratively

The fire management sector will implement the activities agreed to in the plans by preparing programs designed to meet the common needs of those most affected by the adverse impacts of fires.

#### Establishment phase

Fire management planning committees will be established at state and regional levels. The SFMPC will also develop and adopt dispute resolution and non-participation processes and make these available for use by regional and municipal fire management planning committees.

#### Implementation phase

This phase continues the planning process using the IFMP applications (planning process, plan format, risk management process, risk tools, and community engagement framework) and sees the implementation of MFMP's. Planning actions will commence and agencies will design and conduct collaborative work programs.

#### Monitoring and Improvement phase

Committees will use the monitoring and review process to examine the effectiveness of plans and improve them.

## Attachment C - Gippsland RSFMP Alignment to State Objectives

### Gippsland Regional Objectives

#### **Key Theme 3** **Building knowledge**

The RSFMPC will review Regional risks annually and provide any amendments to relevant MFMPC's for consideration.

The Regional Strategic Fire Management Plan (RSFMP) will be reviewed for currency annually, after a major incident or after significant changes to the environment, agency composition or responsibilities, or Regional infrastructure.

Princes Highway

### State Objectives (Summary)

#### **Key Theme 3** **Building knowledge**

The fire management sector will share information and interact with academic and professional institutions, other jurisdictions and communities, in order to build knowledge.

#### **Establishment phase**

The organisational partners involved in IFMP will develop a strong understanding of the integrated fire management planning process. The focus is on developing communications processes and interaction between the fire management planning committees, committee members and the community to ensure thorough implementation of IFMP. Staged implementation of the planning process will begin during this phase.

#### **Implementation phase**

The development of an internet-based interface will allow for contribution and input into the development of plans which will support the planning process. The SFMPC will establish a recognition program to showcase planning successes from regional and municipal planning committees. The SFMPC will also develop an incentive and recognition program. The SFMPC will establish and develop relationships with peak fire management bodies (like the [AFAC], the [FPA] and the Bushfire Cooperative Research Centre) in order to develop new research opportunities and fund new fire management initiatives. Education programs will be developed and implemented to increase and improve the community's knowledge and understanding about the role of fire in all environments.

#### **Monitoring and Improvement phase**

The SFMPC will establish a Centre for Excellence to create opportunities for ongoing research and development into fire management.

## Attachment C - Gippsland RSFMP Alignment to State Objectives

### Gippsland Regional Objectives

#### Key Theme 4

#### Building capacity

The RSFMPC will actively seek opportunities for agency collaboration to improve outcomes for communities and to reduce duplication and agency workloads.

Omeo community meeting

### State Objectives (Summary)

#### Key Theme 4

#### Building capacity

The capability of the sector and the community will be built by applying knowledge and continuous improvement principles in an environment that allows for innovation and change.

#### **Establishment phase**

The SFMPC will develop a policy for training and exercising of fire management plans. This policy will establish the process for committees to exercise their plan's arrangements.

#### **Implementation phase**

The community will be engaged in the preparation of all levels of committee plans, ensuring that members of the public have an opportunity to be involved in fire management planning.

The SFMPC will also work with member agencies to develop and incorporate capacity building initiatives, including comprehensive performance measures, into participating organisations' business plans. The testing and exercising of fire management plans will be a key part of developing capability within the fire management sector. This phase will also include development of review systems. Comprehensive performance measures will be applied to support continuous improvement in fire management planning.

#### **Monitoring and Improvement phase**

The long-term objectives are for organisations and agencies involved in fire management planning to take continuous improvement information and apply improvements to fire management plans.

## Attachment C - Gippsland RSFMP Alignment to State Objectives

### Gippsland Regional Objectives

#### Key Theme 5

##### Using fire

The RSFMPC will actively encourage the use of planned fire to achieve positive ecological and community safety outcomes.

The RSMPC will work with fire agencies in the development of policies and strategies aimed at improving fire management on private land, for ecological as well as community safety purposes, and to achieve integration of complementary works on private and public land.

FA/DEPI conducting joint planned burning

### State Objectives (Summary)

#### Key Theme 5

##### Using fire

Fire will be used to support the health of our natural, economic, social and cultural environments.

##### **Establishment phase**

The State Fire Management Planning Committee will maintain the existing regulatory environment; supporting the economic, social and cultural uses of fire.

##### **Implementation phase**

The SFMPC will develop and implement a strategic approach to the use and management of fire to promote the health and well being of our natural, social, built, economic and cultural environments. The SFMPC, together with its member agencies and organisations, will review and align the current practices associated with the use of fire. This review will incorporate programs that improve collaborative management practices on the private-public land interface into the fire management planning process.

##### **Monitoring and Improvement phase**

The SFMPC and its member agencies and organizations will support the development of a Code of Practice for fire management that integrates policy, procedure and existing practices for fire management on private and public land:

- Minimise impact of fire on business and industry.
- Maintain growth and community links.
- Develop community resilience.
- Deliver community preparedness programs.
- Constructive and productive use of fire.
- Efficient and effective use of resources.
- High quality communications with the community.
- Increased safety for vulnerable members of the community.
- Active participation of community.
- Sound financial management.

## Attachment D - Engagement and Communications Plan

### Aim

To use effective communications to engage Regional Fire Management Planning (RSFMP) stakeholders in the IFMP process.

### Key Strategies<sup>17</sup>

- Consistent attendance and active participation at RSFMPC meetings.
- Be the IFMP/RSFMP “champion” of your agency/organisation. Make fire management part of “normal business”; build capacity, innovation and continuous improvement.
- Working collaboratively to ensuring a consistent, sustainable and integrated approach to fire management planning to reduce the negative impact of fire across Gippsland.

### Objectives

1. Comprehensive understanding of IFMP and its principles amongst key staff in participating organisations.
2. Sharing of good practice examples across participating organisations.
3. Consistent IFMP/RSFMPC messaging within participating organisations and with their stakeholders groups.
4. Opportunities identified to promote a collaborative approach to fire management planning.
5. Promotional articles and images generated.

---

<sup>17</sup> Strategies are based on utilising existing communication channels to avoid duplication and to maximise message efficiency

## Attachment D - Engagement and Communications Plan

### Target Audience

#### Primary Stakeholders

The primary audience for initial communications will be the permanent member agencies of the RSFMPC. Given the change management focus of the work, it is important that this group forms a team approach to managing the transition to a holistic approach to fire management planning.

#### Secondary Stakeholders

The secondary audience relates to either peak bodies or agencies who are not regularly represented on the RSFMPC, but may be requested to attend a committee meeting as a subject matter expert, and whose organisation has a key stake in fire management planning within the Region.

#### Tertiary Stakeholders

The tertiary audience includes other agencies, organisations and interested groups that could support the RSFMPC.

### Communications Tools

The key to sustained and targeted communications is the use of existing communication tools and channels. These will include electronic, face-to-face briefings, meetings and workshops. This communication mix should utilise existing networks and established communications channels within state, regional and local agencies and organisations.

Agencies represented on the RSFMPC will utilise established interagency communication tools including, newsletters, journals, websites, internal briefings, forums or conferences that afford the opportunity to promulgate the message of integrated fire management planning.

### Resources

It is intended that IFMP/RSFMPC communication activity will be integrated in the general business of the member agencies.

## Attachment D - Engagement and Communications Plan

### Implementation

Below is an engagement and communication implementation table which identifies the stakeholder, communication objective and communication tool.

| Primary Stakeholder Agency/Organisation | Level of Engagement and Communications |                           |                                                  |             |         |         |        |  |
|-----------------------------------------|----------------------------------------|---------------------------|--------------------------------------------------|-------------|---------|---------|--------|--|
|                                         | Attend RSFMP Meetings                  | Receive Minutes via Email | Receive Correspondence And Draft RSFMP via email | RSFMP       |         |         |        |  |
| Empowered                               |                                        |                           |                                                  | Collaborate | Involve | Consult | Inform |  |
| Objectives: 1, 2, 3, 4 and 5            |                                        |                           |                                                  |             |         |         |        |  |
| Bass Coast Shire Council                | X                                      | X                         | X                                                | X           |         |         |        |  |
| Baw Baw Shire Council                   | X                                      | X                         | X                                                | X           |         |         |        |  |
| CFA                                     | X                                      | X                         | X                                                | X           |         |         |        |  |
| DEECD                                   | X                                      | X                         | X                                                | X           |         |         |        |  |

### Brief description of your organisation.

Local Government Authority – Bass Coast Shire Council

### Functional responsibilities of your organisation.

As determined by the Local Government Act and other numerous State and Federal Legislation. As determined by the Emergency Management Act and CFA Act

Bass Coast Shire Council is primarily responsible for the maintenance and development of local infrastructure, community compliance with state and federal legislation along with local laws, provision of community services including pools, libraries, sporting facilities, regulatory services such as Town planning, building, health and community development and Emergency management incorporating planning, prevention, response and recovery.

### Who are your stakeholders?

Residents, property owners, visitors, local business and industry and the emergency services.

### List the significant organisational exposures.

Major Events, Desalination Plant, Sea change, Population increase during tourist season.

### Attach your agency's regional profile (LGAs to provide municipal level profile).

Bass Coast's unique combination of unspoiled coastline and picturesque rural hinterland is less than two hours' drive from Melbourne. The main centres - Wonthaggi, Cowes, Inverloch, San Remo and Grantville - service the local population and more than 3.4 million visitors each year.

Phillip Island attracts many visitors with its world famous Penguin Parade and the annual Australian Motorcycle Grand Prix. Regular events at the Grand Prix Circuit are complemented by a number of well-established music festivals and a smorgasbord of arts, local produce and family entertainment at locations across the Shire.

The major industries in Bass Coast are retail, hospitality, construction, health and community services, education and training, and agriculture.

In 2011, the Australian Bureau of Statistics Census recorded Bass Coast's permanent population as 29,616 (2006: 26,545). From 2006 to 2011, Bass Coast's permanent population increased by 3,071 people (11.6%). This represents an average annual population change of 2.21% per year over the period making Bass Coast the fastest growing area in regional Victoria.

During peak holiday periods, Bass Coast's population exceeds 70,000.

The Shire has a higher than average proportion of older residents with 23.6% of the population aged over 65. This is substantially higher than the Australian average of 14.0%.

Bass Coast has a low socio-economic profile and is ranked as an area of disadvantage. (2011 SEIFA)

### Identify your organisation's level of risk (regarding fire incident).

### Brief description of your organisation.

Local Government Authority – Baw Baw Gippsland Shire Council

### Functional responsibilities of your organisation.

As determined by the Local Government Act and other numerous State and Federal Legislation. As determined by the Emergency Management Act and CFA Act

Baw Baw Gippsland Shire Council is primarily responsible for the maintenance and development of local infrastructure, community compliance with state and federal legislation along with local laws, provision of community services including pools, libraries, sporting facilities, regulatory services such as Town planning, building, health and community development and Emergency management incorporating planning, prevention, response and recovery.

### Who are your stakeholders?

Residents, property owners, visitors, local business and industry and the emergency services.

### List the significant organisational exposures.

Fires originating on public land pose a significant threat to adjacent farmland, rural settlements, and towns in the shire.

Rural subdivisions and expansion of the population into rural centers' and interface areas has resulted in more people being exposed to the risks of wildfire.

### Attach your agency's regional profile (LGAs to provide municipal level profile).

Baw Baw Shire covers over 4,000 square kilometres of rolling green hills, towns, mountains and top agricultural land. Baw Baw Shire has a population of over 38,500 people which is expected to grow to almost 48,000 by June 2031. Warragul is the shire's largest town with a population of over 11,500 people. Drouin is the second largest town with a population of just under 6,800 people. Tourism continues to be popular in Baw Baw with Mt Baw Baw, the Tarago and Thomson Rivers, Blue Rock Dam, Toorong Falls Reserve, Glen Nayook, the Ada Tree, Mount Worth, Moondarra and Tarago Reservoirs as just some of the natural attractions visited by tourists. The Baw Baw Shire is a major centre for agricultural production, containing highly productive soils and a high rainfall climate. Agribusiness is the major employment sector in the shire (11.5%, followed by Health Care & Social Assistance (10.53%), Retail (10.31%), Construction (9.65%) and Manufacturing (9.59%). Production within the shire includes dairy and beef cattle, pome fruits (apples), vegetables, potatoes, cool climate grapes, maize, soft fruits (berries and currants), fresh flowers, hydroponic tomatoes and timber.

### Identify your organisation's level of risk (regarding fire incident).

### Brief description of your organisation.

CFA's role is to prevent and suppress fires in the Country area of Victoria. CFA Gippsland is made up of approximately 6000 volunteers supported by 86 staff. The Gippsland Regional office is located in Sale with District Offices in Bairnsdale, Sale and Warragul. Within Gippsland we also operate two integrated fire stations at Morwell and Traralgon where volunteers are supported by full time firefighting staff.

### Functional responsibilities of your organisation.

CFA's functional responsibilities include the prevention and suppression of all fires including structure fires, bushfires, and dangerous goods incidents and in some locations road accident rescue. CFA Gippsland consists of the following functional departments:

- Operations
- Community Safety
- Training and Development
- Human Resources inc OH & S
- Finance and Administration
- Asset Management

### Who are your stakeholders?

CFA establishes and maintains relationships with the following stakeholders:

- Communities
- Municipalities
- DSE
- Parks Victoria
- Victoria Police
- Ambulance Victoria
- HVP
- SP Ausnet
- Major industries inc ESSO, Loy Yang Power, International Power, Tru Energy, Australian Paper
- SES

### List the significant organisational exposures.

- Volunteerism
- Drought
- Community involvement
- Economic stability

## Attach your agency's regional profile (LGAs to provide municipal level profile).

CFA Gippsland consists of three fire control districts:

- District 9 closely aligns with South Gippsland and Baw Baw LGAs, and a small section of Bass Coast Shire.
- Region 10 with Latrobe City and Wellington Shire.
- Region 11 is consistent with East Gippsland Shire.

The primary risk that CFA manages relates to the extensive public land located in significant areas of Gippsland and critical infrastructure including power stations and coal mines, gas exploration and treatment, commercial and industrial complexes and substantial residential areas. Gippsland also includes high percentages of high risk communities including an aged population and lower socio demographics.

The communities of Gippsland, due to a number of significant bushfire events over the past 12 years, demonstrate high levels of resilience in relation to natural disasters.

## Identify your organisation's level of risk (regarding fire incident).

| Risk                                                                   | Level of Risk <ul style="list-style-type: none"> <li>• Low</li> <li>• Medium</li> <li>• High</li> <li>• Extreme</li> </ul> | Likelihood of it occurring <ul style="list-style-type: none"> <li>• Very Rare</li> <li>• Unlikely</li> <li>• Likely</li> <li>• Highly Likely</li> </ul> |
|------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Regional Level</b>                                                  |                                                                                                                            |                                                                                                                                                         |

### Brief description of your organisation.

The Department of Human Services covers the responsibilities of the Ministers for Community Services and Housing.

Gill Callister is Secretary of the Department of Human Services, one of eleven state government departments in Victoria, Australia. She oversees and administers the entire department which has approximately 12,000 staff across 6 divisions and 8 regions.

### Functional responsibilities of your organisation.

We plan, fund and deliver community and housing services in line with the government's vision for making Victoria a stronger, more caring and innovative state.

### Who are your stakeholders?

The Gippsland Region takes in the six municipal councils of East Gippsland, Wellington, Latrobe, Baw Baw, South Gippsland and Bass Coast. We work with local councils, other parts of the State Government, the Commonwealth Government, community organisations and community members to prepare for the future.

### List the significant organisational exposures.

A broad range of health and human service sector organisations and agencies

### Attach your agency's regional profile (LGAs to provide municipal level profile).

Our regional operations cover six LGA's with approximately 247,710 residents and we have departmental offices in Warragul, Morwell, Traralgon, Leongatha, Sale and Bairnsdale.

In conjunction with many stakeholders, our focus is on protecting and promoting health and well being in Gippsland. The majority of regional office staff is involved in providing direct client services in Child Protection and Placement, Youth Justice, Disability Services and Housing. However, much important work is also undertaken in planning and working with the many agencies that provide health and community care services throughout the region.

The Gippsland region stretches along the east coast of the state and covers 41,538 square kilometres, representing over 18% of the landmass of Victoria. It has a population of 240,114, representing 5% of the Victorian population.

It covers six LGA's: Bass Coast Shire, Baw Baw Shire, East Gippsland Shire, Latrobe City, South Gippsland Shire and Wellington Shire.

### Identify your organisation's level of risk (regarding fire incident).

Refer to Victorian Fire Risk Register (Regional Level)

### Brief description of your organisation.

The Department of Planning and Community Development (DPCD) has a central role in managing Victoria's growth and development and building stronger communities.

To achieve this we develop long-term plans for Victoria's regions and cities, invest in infrastructure and services and support the development of local communities. The Department also provides research, policy and planning advice, administers legislation and regulations.

DPCD is committed to engaging communities and businesses to plan for the future. We facilitate partnerships across Victoria's government, business and community sectors and coordinate whole-of-government responses to a broad range of economic, social and environmental issues at a local, regional and state wide level.

We have three broad outcome areas:

- Communities have increased prosperity through education and training, economic development and investment.
- Communities are well-planned and have good access to housing, infrastructure, services and other amenities that they need to work and live.
- Individuals, communities and organisations are more resilient because they have strengthened capacity to collectively plan, take action and attract investment to address local issues.

### Functional responsibilities of your organisation.

DPCD Groups and Business Units

- Planning and Local Government
- Community Development and Regional Delivery
- People and Community Advocacy
- Strategic Policy, Research and Forecasting
- Corporate and Organisational Development, and Communications
- Fire Recovery Unit

### Who are your stakeholders?

We work with local councils, other parts of the State Government, the Commonwealth Government, local businesses, developers, community organisations and community members to prepare for the future.

### List the significant organisational exposures.

- incomplete contract management
- incomplete project/program arrangements
- insufficient support for community
- complaints

### Attach your agency's regional profile (LGAs to provide municipal level profile).

The Gippsland region takes in the six municipal councils of East Gippsland, Wellington, Latrobe, Baw Baw, South Gippsland and Bass Coast. DPCD Community Engagement Gippsland Team employs 16 officers based in Traralgon with two staff based in Bairnsdale.

### Identify your organisation's level of risk (regarding fire incident).

DPCD's role is exclusive to the recovery stage of a disaster.

### Identify the community's level of risk (regarding fire incident).

Not applicable to DPCD as our role does not directly support the community during a fire incident or provide the community with information relating to a fire incident.

### Brief description of your organisation.

The Department of Environment and Primary Industry (DEPI) is Victoria's leading environmental policy-maker, playing a key role in supporting the Victorian Government's priority of achieving environmental sustainability. DSE leads the Victorian Government's efforts to sustainably manage water resources and catchments, climate change, bushfires, parks and other public land, forests, biodiversity and ecosystem conservation.

The Department is also responsible for agriculture, fisheries, earth resources, energy, forestry, game hunting and pet ownership in Victoria. We design and deliver government policies and programs that enable Victoria's primary and energy industries to sustainably maximise the wealth and wellbeing they generate, by providing essential goods and services, employment, investment and recreational opportunities.

### Functional responsibilities of your organisation.

DEPI is responsible for managing public land and other natural resources in Victoria. DEPI is the emergency management control agency for fire on public land, pest and plant infestations (including locusts), exotic marine pest incursion, cetacean (whale) stranding and entanglement, water and sewerage infrastructure disruption and dam safety.

### Who are your stakeholders?

The key stakeholders and delivery partners include Parks Victoria, VicForests, Department of Planning and Community Development, Water Authorities, Catchment Management Authorities, Country Fire Authority, Local Government Authorities, many industry and conservation/environment peak bodies and organisations, other land managers and public land users.

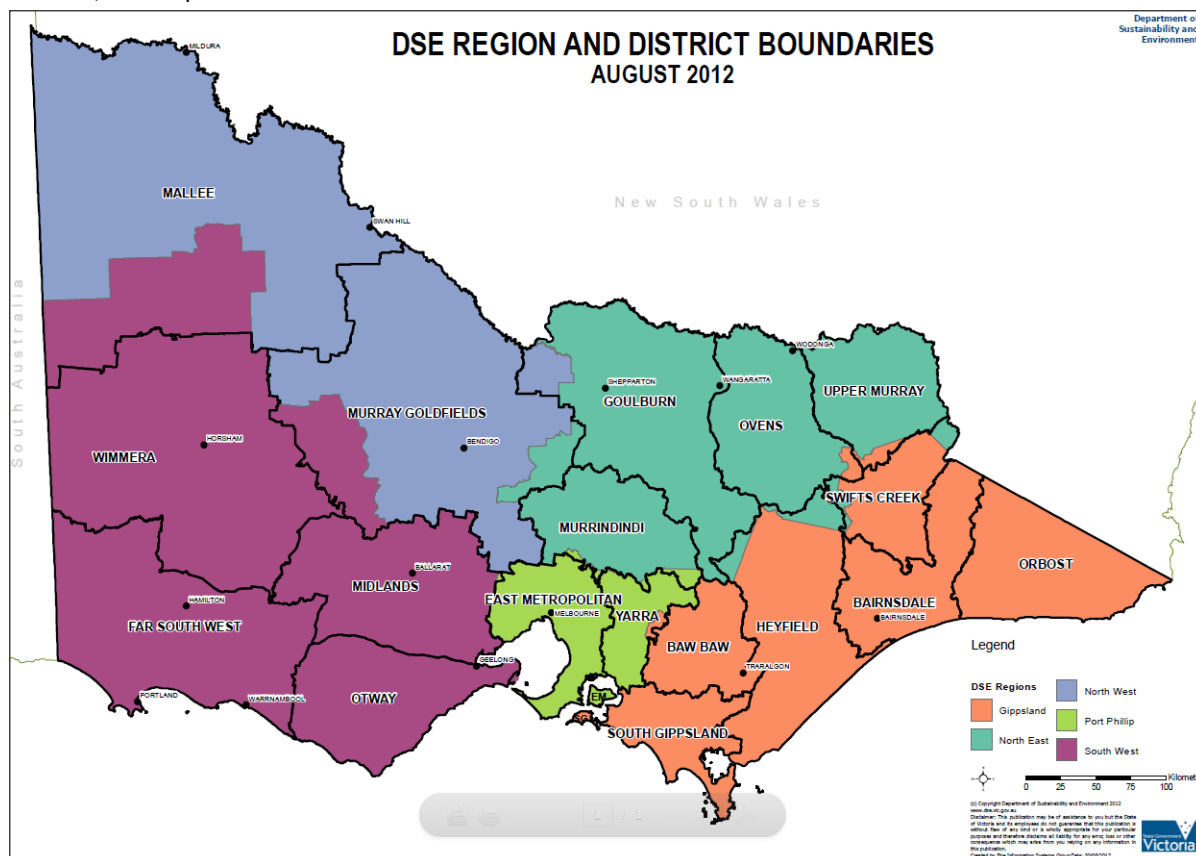

### List the significant organisational exposures.

Key challenges and issues facing land and fire management on public land:

- An increase in the frequency and intensity of bushfires
- Increased fuel reduction burning
- The impacts of climate change and water scarcity
- Dramatic change in rural land use and impacts on natural assets

## Attach your agency's regional profile (LGAs to provide municipal level profile).

DEPI is managed through five Regions (North West, South West, North East, Port Phillip and Gippsland) and 18 districts; see map below.

The Region is managed by a Regional Management Team comprising the following people.

|                   |                                            |
|-------------------|--------------------------------------------|
| Mike Timpano      | Regional Director                          |
| Grange Jephcott   | Regional Manager Land & Fire               |
| Ryan Incoll       | Regional Manager Environment and Water     |
| Frankie MacLennan | Regional Manager Strategy and Partnerships |
| Des Williams      | Regional Manager Primary Industries        |
| Laurie Jeremiah   | Regional Business Manager                  |

DEPI – Land and Fire Management has the statutory responsibility to prevent and suppress wildfire in all Victoria's national parks, State forests and protected public lands: about 7.6 million hectares or approximately one third of the State. This area contains some of Victoria's most significant tourist attractions, vast tracts of wilderness, environmentally significant areas and a substantial proportion of the State's native timber resources.

The Gippsland area is covered by extensive tracts of public land, managed by both Parks Victoria and DSE. The areas of State Forest aim to balance the various uses and values of State forest provide an environment where forest ecosystems are maintained or enhanced, water supplies and environmental and cultural values are protected, and timber production, recreation and other forest uses can continue to benefit local communities.

The areas also contain a number of National Parks that cover around 950,000ha (or 22% of Gippsland) including the iconic Wilson's Promontory and Alpine National Parks. Management of National Parks is primarily for protecting and maintaining ecosystems and species and to provide tourism and recreations activities.

DEPI – Strategy and Partnerships has the responsibility to develop strategic Bushfire Management Plans for each of 7 landscapes across Victoria, two of which occur in Gippsland. These two landscapes are :

Greater Gippsland and Alpine Bushfire Risk Landscape: which includes East Gippsland and Wellington Shires and East Central Bushfire Risk Landscape: which includes Baw Baw Shire , South Gippsland Shire, Bass Coast Shire and the Latrobe City.

### Identify your organisation's level of risk (regarding fire incident).

| Risk                                                                                                   | Level of Risk                                                                                                | Likelihood of it occurring                                                                                                   |
|--------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                        | <ul style="list-style-type: none"> <li>• Low</li> <li>• Medium</li> <li>• High</li> <li>• Extreme</li> </ul> | <ul style="list-style-type: none"> <li>• Very Rare</li> <li>• Unlikely</li> <li>• Likely</li> <li>• Highly Likely</li> </ul> |
| <b>Municipal Level</b>                                                                                 |                                                                                                              |                                                                                                                              |
|                                                                                                        |                                                                                                              |                                                                                                                              |
| <b>Regional Level</b>                                                                                  |                                                                                                              |                                                                                                                              |
|                                                                                                        |                                                                                                              |                                                                                                                              |
| <b>State Level</b>                                                                                     |                                                                                                              |                                                                                                                              |

| <b>Address</b>  |                       |                  |

### Brief description of your organisation.

East Gippsland Shire Council is the Local Government Authority for The East Gippsland Region, 10 per cent of the State land mass.

### Functional responsibilities of your organisation.

As determined by the Local Government Act and other numerous State and Federal Legislation. As determined by the Emergency Management Act and CFA Act

East Gippsland Shire Council is primarily responsible for the maintenance and development of local infrastructure, community compliance with state and federal legislation along with local laws, provision of community services including pools, libraries, sporting facilities, regulatory services such as Town planning, building, health and community development and Emergency management incorporating planning, prevention, response and recovery.

### Who are your stakeholders?

Residents, property owners, visitors, local business and industry and the emergency services.

### List the significant organisational exposures.

- East Gippsland Shire Council staff exposed to extra duty from emergency situations.
- Impact on all other local Volunteer and Government Agencies.
- Impact on business, funding, staffing, contractors, major events and tourism.
- Impact on Public and Private land.

### Attach your agency's regional profile (LGAs to provide municipal level profile).

The East Gippsland Shire is located 300km East of Melbourne, has the towns of Bairnsdale, Bruthen, Buchan, Cann River, Eagle Point, Lake Tyers Beach, Lakes Entrance, Lindenow, Mallacoota, Marlo, Metung, Newlands Arm, Nowa Nowa, Omeo, Orbost, Paynesville and Swifts Creek. It is the second largest Victorian Municipality in area – 10% of the State (21,000 square kilometres) with 280 kilometres of coastline and extensive areas of lakes, including the internationally significant Gippsland Lakes, National Parks and Natural attractions with diverse climate, landform and vegetation types, ranging from alpine areas to coastal areas. We have a population of 40,037 growing at an annual rate of 1%, with significant Australian Aboriginal communities and cultural heritage with 1,140 or approximately 2.8% of the population. The largest sources of employment are the retail trade 13.4%, health care and social assistance 12.1%, agriculture forestry and fishing 9.8% and construction at 9.4%.

The Wellington and Alpine Shires to the West, Towong Shire and New South Wales to the North with Bass Strait forming the Southern boundary.

The Shire's rivers are the Bemm, Brodribb, Buchan, Cann, Genoa, Mitchell, Mitta Mitta, Nicholson, Snowy, Tambo and Wentworth and our lakes are Lake King, Lake Victoria, Lake Tyers, Mallacoota Inlet, Marlo Inlet, Sydenham Inlet, Tamboon Inlet and Wingan Inlet.

The Shire is located on major arterial routes the Princes Highway, Monaro Highway, Omeo Highway and the Great Alpine Road.

- **Princes Highway** – runs east/west through the Shire passing through Bairnsdale, Lakes Entrance, Orbost, Cann River, and Genoa to the New South Wales border and on to Eden and beyond.
- **Great Alpine Road** – runs north from Bairnsdale passing through Bruthen, Swifts Creek, Omeo to Dinner Plain, and the Alpine Shire.
- **Monaro Highway** – formerly known as the Cann Valley Highway runs north from Cann River to the New South Wales border and on to Bombala.
- **Bonang Road** – runs north from Orbost to Goongerah, Bonang to the New South Wales border then onto Delegate and Bombala.
- **The Buchan Road** – runs generally north/east from the Bruthen - Nowa Nowa Road through Buchan, Gelantipy to McKillops Road to Bonang.
- **Omeo Highway** – runs between Omeo and Tallangatta through Glen Valley and Mitta Mitta

A road link exists between Omeo and Corryong passing through Benambra.

The threat of major wildfire on an annual basis throughout the Shire is significant and real, with a long history of fires of substantial scale within the Shire, combined with a long history of substantial flooding of East Gippsland Rivers.

There is potential for storms to cause significant damage throughout the Shire, the area is subject to weather patterns that can cause severe rain, wind and hailstorms.

Several Hazmat / Chemical Spills have occurred on highways throughout the Shire with the last one being at Nowa Nowa in 2002.

### Identify your organisation's level of risk (regarding fire incident).

| Risk                                       | Level of Risk                                                                                                | Likelihood of it occurring                                                                                                   |

### Brief description of your organisation.

Local Government Authority – Latrobe City Council

### Functional responsibilities of your organisation.

As determined by the Local Government Act and other numerous State and Federal Legislation. As determined by the Emergency Management Act and CFA Act

Latrobe City Council is primarily responsible for the maintenance and development of local infrastructure, community compliance with state and federal legislation along with local laws, provision of community services including pools, libraries, sporting facilities, regulatory services such as Town planning, building, health and community development and Emergency management incorporating:

- Preparedness & Prevention of Fires – Fire prevention inspections / fines
- Maintain and operate the Municipal Emergency Coordination Centre
- Latrobe City is involved in prevention and recovery
- Liaise with the lead agencies.

### Who are your stakeholders?

Residents, property owners, visitors, local business and industry and the emergency services.

### List the significant organisational exposures.

Technical failures, Retention of Staff, Loss of intellectual property, Continuity of information exchange.

### Attach your agency's regional profile (LGAs to provide municipal level profile).

The major towns are Moe, Morwell and Traralgon. Each town contains extensive commercial and industrial development. Churchill offers a medium sized town and accommodates the Gippsland Campus of Monash University. There are the smaller urban centres at Yinnar, Boolarra, Traralgon South, Hazelwood North, Yallourn North, Tyers, Glengarry and Toongabbie. There are also numerous hobby type farms throughout the City.

The major industries are the extensive power industries with electricity generation from coal, paper manufacture, education, and agriculture and timber plantations.

The average rainfall for the City is around 820 mm per annum. The area has a mild climate with an average minimum temperature of 8°C and an average maximum temperature of 20°C. The temperature extremes vary from around -2°C to +40°C.

The fire history throughout the Latrobe City shows that there have been numerous wildfires since European occupation. The Heyfield Group area has experienced major fires, significantly in 1939, 1944, 1968, 2005 and 2006. Since 1968, there have been fires every year with significant fires occurring or having potential until stopped, around every 10 year period. The risks have changed over the years and the concerns are now with the areas of bush land interface with urban areas, house fires, rural residential development and recreational activities in the bush land areas with little preparation for fire safety. The potential still exists, however, for major fires given the scenario of extreme weather conditions and fuel loadings.

The Morwell Group area has also experienced major fires. The bushfires of 1939, 1944, 1962, 1978, 1982, 1983, 2003, 2006 and 2009 the Black Saturday Churchill fire that killed 11 people in Latrobe City these were significant fires. Significant fires have also occurred in the coal open cuts in 1944, 1977, 1982, 2006. Smaller fires have occurred in the power generating plants in recent years, with one in particular closing the Morwell briquette factory. The potential, however, is ever present for a fire and every effort and commitment is required to educate all residents and visitors, provide for preventative measures to reduce the opportunity and intensity of any fire and to be prepared to act efficiently and effectively in the event of any fire.

The Narracan Group area has experienced major fires, significantly in 1939 and 1944. Since then there have been significant fires in the mid '60s, late '70s, early '80s and 2005/06 season. Most of these fires did not develop into major proportions with the exception of the 2005/06 fire. This was due, in part, to prevention activities and quick responses from local brigades. The potential still exists for major fires given the scenario of extreme weather conditions and fuel loadings. The advent of rural type subdivisions, many in bush environments, during the '70s and '80s, will result in more lives and property at risk in a major fire situation.

#### Identify the community's level of risk (regarding fire incident).

| Risk                     | Level of Risk                                                                                                | Likelihood of it occurring                                                                                                   |

### Brief description of your organisation.

Local Government Authority – South Gippsland Shire Council

### Functional responsibilities of your organisation.

As determined by the Local Government Act and other numerous State and Federal Legislation. As determined by the Emergency Management Act and CFA Act

South Gippsland Shire Council is primarily responsible for the maintenance and development of local infrastructure, community compliance with state and federal legislation along with local laws, provision of community services including pools, libraries, sporting facilities, regulatory services such as Town planning, building, health and community development and Emergency management incorporating planning, prevention, response and recovery.

### Who are your stakeholders?

Residents, property owners, visitors, local business and industry and the emergency services.

### List the significant organisational exposures.

Reputation, business performance and capability, financial, security of assets, environment, legal exposure and health and safety of shire activities (community or staff).

### Attach your agency's regional profile (LGAs to provide municipal level profile).

South Gippsland Shire Council was created on 2 December 1994, with the merger of the former Shires of Korumburra, Woorayl, Mirboo and South Gippsland. The Shire covers an area of 3,280 square kilometres and some of the nation's most arable agricultural land. Today the South Gippsland Shire Council is accountable for approximately 18,000 rate assessments and an expanding population in excess of 27,000. Taking in the major townships of Korumburra, Leongatha, Mirboo North and Foster, South Gippsland offers a diverse range of commercial, social, cultural and environmental qualities. The Shire has a thriving range of commercial enterprises and small businesses. Economic development is strong in the industries of dairying, horticulture, forestry, fishing, boutique food and wine, retail trade, manufacturing and tourism. South Gippsland is a vibrant and exciting Shire, boasting prominent tourist sites such as Wilsons Promontory National Park, Agnes Falls and Coal Creek Heritage Village. We are also very proud of our beautiful parks and gardens and our magnificent coastline. The region is rich in resources and offers a favourable climate for a wide range of lifestyle activities.

### Brief description of your organisation.

VicRoads is the registered business name of the Roads Corporation, a statutory Corporation within the Victorian Government infrastructure portfolio. The infrastructure portfolio comes under the responsibility of the Minister for Roads and Ports.

### Functional responsibilities of your organisation.

The functions and objects of the Corporation are outlined in the Transport Act 1983, Road Safety Act 1986 and the Road Management Act 2004. These Acts provide VicRoads with the powers to manage the 22,320 km of Victoria's arterial road network, implement road safety strategies and programs and provide vehicle registration and driver licensing services.

### Who are your stakeholders?

Car and truck drivers, tram and bus users, motorcyclists, cyclists, pedestrians, residents, businesses, other government agencies and local government.

### List the significant organisational exposures.

Reputation, Business Performance & Capability, Financial, Security of Assets, Management Effort, Environment, Legal and Compliance, and Health & Safety of VicRoads activities (community or staff).

### Attach your agency's regional profile (LGAs to provide municipal level profile).

VicRoads' Eastern Region spans from Bunyip River on the Princes Highway to the New South Wales border and from the Alpine Snow fields to the coastline along Wilson's Promontory and Phillip Island.

Eastern Region has approximately 130 employees working from offices in Traralgon and Bairnsdale, with Customer Service Centres located in Bairnsdale, Morwell, Leongatha, Warragul and Sale.

### Identify your organisation's level of risk (regarding fire incident).

### Brief description of your organisation.

Victoria Police provides a 24-hour police service to the Victorian community. Victoria Police contributes to a high quality of life for individuals in the community by ensuring a safe and secure society and underpins the economic, social and cultural wellbeing of Victoria.

Victoria Police is a large organisation employing more than 14,500 people including police, public servants and protective security officers, serving Victoria, with a population in excess of five million. With 339 police stations and other facilities, Victoria Police provides support to the community 24 hours a day, 365 days of the year.

### Functional responsibilities of your organisation.

Preventing and investigating crime, ensuring public safety and road safety are our focus. Our 4 main goals for 2008 – 2013 are:

- A 12 per cent reduction in crime.
- A reduction of the road toll and incidence of road trauma in line with Victoria's arrive alive! road safety strategy.
- Improving the community's confidence in Victoria Police, and increase their satisfaction with the delivery of police services.
- Ensuring the health, safety and wellbeing of staff, providing ethical, values-based leadership and valuing the skills and experience of staff.

**Who are your stakeholders?** Very broad and, in fact, the entire community.

**List the significant organisational exposures.** We are highly dependent on community confidence.

**Identify your organisation's level of risk (regarding fire incident).**

### Brief description of your organisation.

The Victoria State Emergency Service (VICSES) is a volunteer based statutory emergency service authority, providing a range of emergency services and broader emergency management support services throughout the State of Victoria. VICSES responds to emergencies and works to ensure the safety of the communities around Victoria. VICSES is the control agency when responding to floods, storms, tsunamis and earthquakes and operates the largest network of road rescue services providers in Australia.

### Functional responsibilities of your organisation.

VICSES has a wide range of roles including planning for and responding to floods, severe storms, earthquakes, tsunamis. It also directly supports VICPOL in rescue based tasking for road, air, industrial and rail accidents throughout Victoria including search and rescue. VICSES provides a support role to other emergency service agencies, including CFA and Ambulance for a range of other tasks e.g. lighting, communications, logistical support, incident management. More than 5,500 volunteers provide this response 24 hours a day, seven day a week across the state.

VICSES has a major planning role providing support and guidance to Government departments and municipalities, as well as providing an audit role on all municipal emergency plans.

### Who are your stakeholders?

- The 6 Gippsland Councils.
- Victoria Police and all Gippsland emergency service organisations (ESO's).
- Commonwealth agencies – e.g. BoM, CSIRO, Defence, EMA.
- State Agencies represented in Gippsland e.g. Transport, Education, DSE, DHS, DPI, EPA.
- Catchment management agencies and water authorities.
- Gippsland EM, Relief and Recovery bodies e.g. committees and subcommittees.
- Private industry – e.g. essential industries group, Telstra etc.
- Philanthropic organisations.
- Residents of Gippsland.
- Gippsland Media Agencies.

### List the significant organisational exposures.

Resource capacity – primarily human e.g. lack of permanent operations officers. Funding of volunteer Units by Councils.

### Attach your agency's regional profile.

East Region covers much of rural Victoria stretching from San Remo near Phillip Island to Cann River near the Victoria/NSW border with an area of approximately 41560 sq km. It encompasses the municipalities of Bass Coast Shire, Baw Baw Shire, South Gippsland Shire, Latrobe City, Wellington Shire and East Gippsland Shire.

Four of these shire areas sit within the Response Division of Morwell and two within Bairnsdale. Support is provided to the community via 25 operational volunteer units and a approximately 15 staff who lead the provision of support to municipal, divisional and regional emergency management committees and agencies and the broader community. The Regional Headquarters is based in Moe and, due to the size of the area; a Regional Office is also located in Bairnsdale.

There are approximately 800 VICSES volunteers who make up 25 Units across the region.

### Identify your organisation's level of risk (regarding fire incident).

| Risk                                   | Level of Risk <ul style="list-style-type: none"> <li>• Low</li> <li>• Medium</li> <li>• High</li> <li>• Extreme</li> </ul> | Likelihood of it occurring <ul style="list-style-type: none"> <li>• Very Rare</li> <li>• Unlikely</li> <li>• Likely</li> <li>• Highly Likely</li> </ul> |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Municipal Level</b>                 |                                                                                                                            |                                                                                                                                                         |

### Brief description of your organisation.

Local Government Authority – Wellington Shire Council

### Functional responsibilities of your organisation.

As determined by the Local Government Act and other numerous State and Federal Legislation. As determined by the Emergency Management Act and CFA Act

Wellington Shire primarily is responsible for the maintenance and development of local infrastructure, community compliance with state and federal legislation along with local laws, provision of community services including pools, libraries, sporting facilities, regulatory services such as Town planning, building, health and community development and Emergency management incorporating planning, prevention, response and recovery.

### Who are your stakeholders?

Residents, property owners, visitors, local business and industry and the emergency services.

### List the significant organisational exposures.

Major Events, RAAF Base, West Sale Aerodrome, Esso Longford Gas Plant, climate change and population increase during the tourist season.

### Attach your agency's regional profile (LGAs to provide municipal level profile).

The Wellington Shire covers an area of 10,400 sq km and contains a population of just over 40,000.

The municipality takes in the coastal and plains area east of Wilson's Promontory, including Townships of Yarram, Rosedale and Sale, and extends inland to include the rugged country of the Great Dividing Range north of Maffra and Stratford. It is bounded to the west by the Latrobe Valley. To the east, Bairnsdale and Lakes Entrance mark the gateway to East Gippsland.

There are few west east road links through Wellington Shire, with the Princes Highway the main roadway through the Shire with the South Gippsland Highway, providing an east west roadway from the Sale township to the south.

The area is serviced by rail east to west through the municipality with passenger services from Melbourne in the West to Bairnsdale in the East. Airports are located at West Sale (Fulham) for passenger and freight with a military air base located at the East Sale RAAF Base. The RAAF Base is a restricted military area. There is also a smaller Airfield near Yarram. Wellington Shire also takes in a portion of the Ninety Mile Beach, together with part of the Gippsland Lakes system.

**Identify your organisation's level of risk (regarding fire incident).**

### Brief description of your organisation.

HVP Plantations (HVP) are the largest plantation owner in Victoria. In Gippsland, HVP manages over 120,000 ha of land. Of this 82,000 ha is plantation and 40,000 ha is native forest. Of the plantation approximately 70% is pine with the remainder being eucalypt.

Significant plantation areas in Gippsland are located at: Loch Valley, Neerim East, Mt Worth, Childers, Mirboo North, Delburn, Driffield, Moondarra, Maryvale, Yallourn North, Tyers, Glengarry, Toongabbie, Flynn, Willung, Longford, Stradbroke, Mullungdung, Yarram, Stockdale, Briagolong and the entire eastern Strzeleckis from Gunyah/Turtions area to Carrajung. .

To protect our resource, HVP has its own extensive fire fighting resources organised into CFA Forest Industry Brigades. These resources include, 70 fire fighters, 9 4x4 tankers, 15 4x4 slip on units, a water bombing helicopter, several bulldozers and graders, a fire spotter plane, 3 fire lookout towers, as well as all the associated ancillary equipment.

### Functional responsibilities of your organisation.

HVP is responsible for establishing and managing its plantations in the Gippsland area. In a fire situation, HVP fire resources are part of the CFA and fit into the standard Incident Management protocols. HVP crews work with both CFA and DEPI in responding to fires on and near the company estate.

### Who are your stakeholders?

- Our owners and investors
- CFA, DSE, Parks Victoria
- Our customers who depend on our products, Australian Paper (Maryvale), Carter Holt Harvey sawmills at Morwell and Yarram as well as a number of smaller customers.
- Our neighbours and community.

### List the significant organisational exposures.

- Fire
- Drought, Wind and Hail
- Pest and Disease

### Attach your agency's regional profile (LGAs to provide municipal level profile).

Within the region we are by far the largest plantation company owning about 80% of the plantation resource. The plantation estate is spread around the following areas in Gippsland: Loch Valley, Neerim East, Mt Worth, Childers, Mirboo North, Delburn, Driffield, Moondarra, Maryvale, Yallourn North, Tyers, Glengarry, Toongabbie, Flynn, Willung, Longford, Stradbroke, Glencoe, Mullungdung, Yarram, Stockdale, Briagolong and the entire eastern Strzeleckis from the Gunyah/Turtions area to Carrajung.

### Identify your organisation's level of risk (regarding fire incident).

| Risk                                       | Level of Risk <ul style="list-style-type: none"> <li>• Low</li> <li>• Medium</li> <li>• High</li> <li>• Extreme</li> </ul> | Likelihood of it occurring <ul style="list-style-type: none"> <li>• Very Rare</li> <li>• Unlikely</li> <li>• Likely</li> <li>• Highly Likely</li> </ul> |
|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Municipal, Regional and State Level</b> |                                                                                                                            |                                                                                                                                                         |

## Attachment G - Gippsland Regional Bushfire History

The predominant cause of majority of fires in the Gippsland Region is lightning strike. Many of the lightning strikes in forest areas started in remote, inaccessible mountain country where fire fighting was difficult, hazardous and time-consuming. The other two main causes of fire are deliberately lit fires and campfires. More major fires include:

### **1898: 1 February 'Red Tuesday'**

Fires burnt 260,000 hectares in South Gippsland. Twelve lives and more than 2,000 buildings were destroyed.

### **Early 1900s**

Destructive and widespread fires are reported to have occurred in 1905 and 1906. Fires extended from Gippsland to the Grampians in 1912. In 1914, fires burnt more than 100,000 hectares.

### **1926: February to March**

Forest fires burnt across large areas of Gippsland throughout February and into early March. Sixty lives were lost in addition to widespread damage to farms, homes and forests.

### **1932**

Major fires occurred in many districts across Victoria throughout the summer. Large areas of State forest in Gippsland were burnt and nine lives were lost.

### **1939: 13 January 'Black Friday'**

From December 1938 to January 1939, fires burnt 1.5 to 2 million hectares, including 800,000 hectares of protected forest, 600,000 hectares of reserved forest and 4,000 hectares of plantations. The fire severity peaked on Friday January 13 - "Black Friday". The fires caused seventy one fatalities and destroyed more than 650 buildings and the township of Narbethong. The findings of the Royal Commission that was held following the fires were highly significant in increasing fire awareness and prevention throughout Australia. The fires affected almost every section of Victoria. Areas hardest hit included Noojee, Woods Point, Omeo, Warrandyte, and Yarra Glen. Other areas affected include Warburton, Erica, Rubicon, Dromana, Mansfield, the Otway Ranges and the Grampian Ranges.

### **1942: 3 to 4 March**

Fires in South Gippsland caused one fatality, large losses of stock and destroyed more than 20 homes and two farms.

### **1965: 21 February to 13 March**

Fires in Gippsland burnt for 17 days, covering 300,000 hectares of forest and 15,000 hectares of grassland. Over 60 buildings and 4,000 stock were destroyed.

### **1983: 31 January**

Fires in the Cann River forest district burnt more than 250,000 hectares including large areas of State forest and some 6,000 hectares of private land.

### **1985: 14 January**

111 fires started from lightning strikes. The campaign lasted two weeks and cost approx. \$7 million.

### **1997: December – January 1998 "Caledonia fires"**

Fire started from a camp fire and burnt 32,000 hectares. Several CFA firefighters injured, one seriously.

## Attachment G - Gippsland Regional Bushfire History

### 2003: January - March<sup>24</sup>

Fires were caused by lightning strikes and deliberate lightings, with a lesser number the result of campfires or barbecues or unknown sources. The majority of fires in January started on the evening of January 7 when dry lightning storms swept through the Victorian Alps, starting around 87 fires. Again, severe conditions enabled the fires to take hold and spread rapidly. In the Gippsland Region the fire causing concern was the Razorback (40 km north of Omeo) - 5,500 hectares burnt. With the combined predicament of steep terrain and erratic fire behaviour, caused by warm, dry weather and subsequent low fuel moisture contents, fire suppression proved very difficult for firefighters. Over the following 7 weeks, the fires in the north and Gippsland joined with those burning in NSW and the ACT to form a front more than 800 kilometres long and spanning 3 states, from Mt Buffalo in the west to the NSW border to the Tubbut area in East Gippsland.

### December 2006 to March 2007

Fire agencies responded to more than 1,000 fires across Victoria from mid-December 2006 to mid-March 2007. The total area burnt by these fires on public and private land exceeding 1,200,000 hectares. The two most serious fires occurred in the north east (the 'Great Divide North' fire) and Gippsland (the 'Great Divide South' fire). These fires were eventually contained in mid February 2007 after burning for 59 days. The Great Divide North and South fires burned a total of 1,048,238 hectares, almost entirely on public land. Other significant fires burning at the same time in the Gippsland Region were in the following areas:

- Coopers Creek – 40,000 hectares.
- Moondarra/Erica – 15,113 hectares
- Boulder Creek/Club Terrace – started by lightning, burnt 2040 hectares

### 2009: 7 February 'Black Saturday'

Victoria was devastated by the worst bushfires in Australia's history when 173 people lost their lives. Around 78 communities were directly impacted and entire towns were left unrecognisable. The fires burnt more than 2,000 properties and 61 businesses. Police stations, schools and kindergartens, fire and emergency services facilities, churches, community halls and sporting clubs were also destroyed or badly damaged. Almost 430,000 hectares of land were directly affected, including 70 national parks and reserves and over 3,550 agricultural facilities. In the Gippsland Region the:

- Delburn fire started on 28 January and burnt 6,440 Hectares
- Wilsons Promontory fire was started by lightning on 9 February and burn 21,028 Hectares.
- Won Wron fire started on 23 February and burnt 1,365 Hectares

These three fires were later included as part of the 'Black Saturday' fires.

### 2011: 1 to 11 February

Fire at Tostaree burnt approximately 11,365 Hectares with a perimeter of 111 km. Two houses and a shed were lost, also the historic Trestle Bridge over Hospital creek at Tostaree.

### 2013: January- February 2013

The Aberfeldy - Donnelly's fire started from an illegal burn and burnt 86,840 hectares in Aberfeldy, Heyfield and Seaton. Losses included one fatality, 21 homes, 54 sheds/outbuildings, 17 vehicles and 170 livestock.

<sup>24</sup> These figures includes Bogong Complex North, Bogong Complex South and south east NSW

|-------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Acceptable risk</b>                                      | The level of potential losses that a society or community considers acceptable, given existing social, economic, political, cultural, technical and environmental conditions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Assets and values<sup>25</sup></b>                       | Recognised features of the built, natural and cultural environments. Built assets may include buildings, roads and bridges; structures managed by utility and service providers; or recognised features of private land, such as houses, property, stock and crops and associated buildings and equipment. Natural assets may include forest produce, forest regeneration, conservation values including vegetation types, fauna, and air and water catchments*. Cultural values may include recreational, Indigenous, historical, archaeological and landscape values.                                                                                                    |
| <b>Assumption</b>                                           | A conclusion that is reached based on the information available at the time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Bushfire</b>                                             | A general term used to describe a fire in vegetation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Combustible gas</b>                                      | A gas that will burn when it is within its flammability range.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Combustible liquid</b>                                   | A liquid that has a flash point above 61° C.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Combustion</b>                                           | Rapid oxidation of fuels producing heat, and often light.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Community based disaster risk management<sup>3</sup></b> | A process that seeks to develop and implement strategies and activities for disaster preparedness (and often risk reduction) that is locally appropriate and locally 'owned'.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Consequence</b>                                          | Outcome or impact of an event.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Critical infrastructure</b>                              | <p>Critical infrastructure includes those services, physical facilities, supply chains, information technologies and communication networks that, if destroyed, degraded or rendered unavailable for an extended period, would significantly impact on the social or economic well-being of the community.</p> <p>Includes:</p> <ul style="list-style-type: none"> <li>• Telecommunications</li> <li>• Electrical power systems</li> <li>• Gas and oil storage and transportation</li> <li>• Banking and finance</li> <li>• Transportation</li> <li>• Water supply systems (and sewerage).</li> </ul> <p>Adapted from Critical Infrastructure Advisory Council (CIAC).</p> |
| <b>Elements at risk</b>                                     | The population, buildings and civil engineering works, economic activities, public services and infrastructure etc. exposed to sources of risk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Emergency</b>                                            | An event, actual, or imminent that endangers or threatens to endanger life, property or the environment, and that requires a significant and coordinated response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Term                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Practicable</b> <sup>27</sup> | What is realistic to achieve in the context of: <ul style="list-style-type: none"> <li>the severity of the hazard or risk in question</li> <li>the state of knowledge about that hazard or risk and any ways of</li> <li>removing or mitigating that hazard or risk</li> <li>the availability and suitability of ways to remove or mitigate that hazard or risk</li> <li>the cost of removing or mitigating that hazard or risk.</li> </ul> |
| <b>Preparedness</b>              | Arrangements to ensure that in the event of an emergency all those resources and services that are needed to cope with the effects can be efficiently mobilised and deployed.                                                                                                                                                                                                                                                               |
| <b>Prevention</b>                | Regulatory and physical measures to ensure that emergencies are prevented, or their effects mitigated.                                                                                                                                                                                                                                                                                                                                      |
| <b>Probability</b>               | A measure of the chance of occurrence expressed as a number between 0 and 1. 'Frequency' or 'likelihood' rather than 'probability' may be used in describing risk. The likelihood of a specific outcome, as measured by the ratio of specific outcomes to the total number of possible outcomes. Probabilities are commonly expressed in terms of percentage.                                                                               |
| <b>Recovery</b>                  | The coordinated process of supporting emergency affected communities in the reconstruction of the physical infrastructure and restoration of emotional, social, economic and physical wellbeing.                                                                                                                                                                                                                                            |
| <b>Residual risk</b>             | Risk remaining after implementation of risk treatment.                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Resilience</b>                | The capacity of a system, community or society potentially exposed to hazards to adapt, by resisting or changing in order to reach and maintain an acceptable level of functioning and structure. This is determined by the degree to which the social system is capable of organizing itself to increase its capacity for learning from past disasters for better future protection and to improve risk reduction measures <sup>28</sup>   |
| <b>Response</b>                  | Actions taken in anticipation of, during and immediately after an emergency, to ensure its effects are minimised and that people affected are given immediate relief and support.                                                                                                                                                                                                                                                           |
| <b>Risk</b>                      | The chance of something happening that will have an impact on objectives.<br><br>The probability of harmful consequences resulting from interaction between natural or human-induced hazards and vulnerable conditions <sup>6</sup> .                                                                                                                                                                                                       |
| <b>Risk analysis</b>             | Systematic process to understand the nature of, and deduce, the level of risk.                                                                                                                                                                                                                                                                                                                                                              |
| <b>Risk assessment</b>           | The overall process of risk identification, analysis and evaluation                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Risk criteria</b>             | Terms of reference by which the significance of risk is assessed.                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Risk evaluation</b>           | Process of comparing the level of risk against risk criteria.                                                                                                                                                                                                                                                                                                                                                                               |

## Attachment H - Glossary

| Term                                      | Description                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Risk identification</b>                | The process of determining what, where, when, why and how something could happen.                                                                                                                                                                                                                                              |
| <b>Risk management</b>                    | The culture, process and structures that are directed towards realising potential opportunities whilst managing adverse effects.                                                                                                                                                                                               |
| <b>Risk management process</b>            | The systematic application of management of policies, procedures and practices to the tasks of communicating, establishing the context, identifying, analysing, evaluating, treating, monitoring and reviewing risk.                                                                                                           |
| <b>Risk reduction</b>                     | Actions taken to lessen the likelihood, negative consequences, or both, associated with a risk.                                                                                                                                                                                                                                |
| <b>Risk register</b>                      | A listing of risk statements describing sources of risk and elements at risk, with assigned consequences, likelihoods and levels of risk.                                                                                                                                                                                      |
| <b>Risk treatment</b>                     | Process of selection and implementation of measures to modify risk. The term 'risk treatment' is sometimes used for the measures themselves.                                                                                                                                                                                   |
| <b>Source of risk</b>                     | Source of potential harm.                                                                                                                                                                                                                                                                                                      |
| <b>Stakeholders</b>                       | Those people and organisations who may affect, be affected by, or perceive themselves to be affected by a decision, activity or risk.                                                                                                                                                                                          |
| <b>Susceptibility</b>                     | The potential to be affected by loss.                                                                                                                                                                                                                                                                                          |
| <b>Tolerable Risk</b>                     | A risk within a range that society can live with so as to secure certain net benefits. It is the range of risk regarded as non-negligible and needing to be kept under review and reduced further if possible.                                                                                                                 |
| <b>Treatment</b>                          | An existing process, policy, device, practice or other action that acts to minimise negative risk or enhance positive opportunities. The word control may also be applied to a process designed to provide reasonable assurance regarding the achievement of objectives.                                                       |
| <b>Treatment assessment</b>               | Systematic review of processes to ensure that controls are still effective and appropriate.                                                                                                                                                                                                                                    |
| <b>Vulnerability</b>                      | The conditions determined by physical, social, economic and environmental factors or processes, which increase the susceptibility of a community to the impact of hazards. <sup>29</sup>                                                                                                                                       |
| <b>Vulnerable people (DHS definition)</b> | Those living in high bushfire risk areas and who are unable to make an independent decision, including due to cognitive impairment; physically dependant and totally reliant on in home personal care and support; and people who live alone and are geographically and socially isolated with no co-resident carer or family. |

## Attachment J – Fire Consequences Template

### Gippsland Fire Risk and Consequences Plan

This Regional Risk and Consequence Plan was developed by applying the following principles as provided by the State Risk and Consequence Unit:-

- Use of the information and the Regional Plan template provided by the State Strategic Risk and Consequence Unit to guide the Regional Risk and Consequence process and thinking.
- Assess each element of the risk detailed in the Plan to determine whether, plans are in place, plans are complete or require work.
- Provide an overall risk rating to each risk and to the individual actions. The current risk rating applied to each of the risks is the rating included in the State Risk and Consequence Framework this should be reassessed for Regional Plans.
- Ensure the Primary Risk Owner and relevant support agencies participate in this process to deliver an integrated outcome.
- Where there is evident gaps existing ensure they are treated. Individuals should be identified and have accountability for resolving gaps.
- Identify whether the information provided from State is comprehensive and covers all of the risk elements particular to a Regional jurisdiction. If any additional risks elements are identified these should be included in the Plan and the State informed.
- The Regional Risk and Consequence Plan should be reviewed on a regular basis dependent on changing conditions and will be discussed and adopted at the Regional Emergency Management Team Meetings/Teleconference.
- Regional Risk and Consequence Plans must be submitted to the State Fire Controller every seven days or as requested with changes identified if relevant.
- The State Risk and Consequence Framework can assist in the development of the Regional Risk and Consequence Plans.

## Risk Assessment

This plan captures the identified risks to the region at a whole-of-government (WoG) level, and takes account of any current emergencies. The risk ratings are provided in the context of the risk to the region and municipalities, not at the local incident level.

The following risk assessment matrix has been used to assess risks:

|                | Insignificant | Minor  | Moderate | Major   | Severe  |
|----------------|---------------|--------|----------|---------|---------|
| Almost Certain | Medium        | High   | High     | Extreme | Extreme |
| Likely         | Medium        | Medium | High     | High    | Extreme |
| Possible       | Low           | Medium | Medium   | High    | Extreme |
| Unlikely       | Low           | Medium | Medium   | Medium  | High    |
| Rare           | Low           | Low    | Medium   | Medium  | High    |

The various identified risks, together with associated actions and ratings, are described on the pages that follow.

| State Risk Ref: 1                                                         | <b>Ineffective regional planning arrangements across response, relief and recovery for major bushfire and heat incidents.</b> | Primary Risk Owner:<br><b>Regional Controller</b>                                                                                                                                                                                                                                                                                                                      | <b>Overall Risk Rating<br/>Medium</b> |

## Attachment L – Integrated Fire Management Plan for French Island

### Integrated Fire Management Planning for French Island

#### Agreed arrangements between Gippsland and Southern Metropolitan Regional Strategic Fire Management Committees (RSFMPCs)

French Island is the only unincorporated locality in Victoria - that is, it has no municipal council. Because of its unique status French Island does not fall within the usual municipal emergency management arrangements. To complicate matters French Island sits within the Victorian Government region of Gippsland, yet for emergency response and recovery planning purposes, most government agencies (including Victoria Police, CFA, DSE and Parks Victoria but not including DPCD and SES) manage service delivery from within the Mornington Peninsula which is within the Victorian Government's Southern Metropolitan Region.

Given the above and the need for an integrated approach to fire management planning for the island, as required under the Integrated Fire Management Planning framework, it has become necessary to formalise planning arrangements for French Island as follows:

- **All fire management planning will be initiated and co-ordinated by the Southern Metropolitan RSFMPC**
- **Members of the Gippsland RSFMPC agree to ensure agency representatives from Gippsland participate in the planning process when requested by the Southern Metropolitan RSFMPC**
- **Individual agencies shall continue to manage their own agency service delivery in line with agency planning arrangements, and where appropriate these arrangements shall be reflected in the Fire Management Plan for French Island**
- **French Island fire management planning shall be reflected in the Southern Metropolitan Regional Strategic Fire Management Plan.**
