Local Emergency Planning Factors

Version 2.1

PREPARE. ACT. SURVIVE.

The Township Protection Plan and Township planning Factors are two planning documents that contain information and maps that will help in planning and preparation for bushfire which assists residents to make informed decisions and assists emergency services in responding to fire.

Purpose

The Community Information Guide and Local Emergency Planning Factors provide a planned response to a bushfire within, or in close proximity to, this township that has the potential to impact on the local community. The documents provide pre determined actions that will enable quick and informed decision making by both the community and emergency services.

Understanding the documents

Community Information Guide: A stand alone section that the community (permanent and tourists/visitors) may freely access throughout the year to enhance their knowledge of key locations and facilities (e.g. Neighbourhood Safer Places – where available) and details of where they can obtain the latest emergency & bushfire information. This also contains the Community Map. Development should include engagement of the community to explore local knowledge, history, culture and people’s needs for safety and protection during an emergency incident. It should also be developed in consultation with other emergency services and relevant stakeholders.

Audience – The community.

Local Emergency Planning Factors: Provides planning factors to enhance the initial operational response to a bushfire impacting the township. Also includes an overview of the township and a map of the key operational planning factors (such as Traffic Management Points, Neighbourhood Safer Places, essential infrastructure etc). This section should be developed in consultation with other emergency services, the local municipality and other relevant parties.

Audience – This is an emergency services document

Development

This Community Information Guide and Local Emergency Planning Factors have been developed in consultation with:

- Anglesea Fire Brigade
- CFA Representative
- IFMPC

Glossary

Term	Definition
Anchor Point	An advantageous location from which a fire line can be constructed. It is used to minimise the possibility of being outflanked by a fire while the line is being constructed.
Community Fire Refuges	A community fire refuge is a designated building open to the public that can provide short-term shelter from the immediate life-threatening effects of a bushfire event
IFMP	Integrated Fire Management Planning (IFMP) is a holistic and integrated risk based planning framework for fire management, across all land tenures and boundaries including prevention, preparedness, response and recovery
High Risk Environment	Area of the fire ground that is characterised as a very high hazard under certain conditions.
IAP2	International Association of Public Participation
MEMPC	Municipal Emergency Management Planning Committee
MEMP	Municipal Emergency Management Plan
MFMP	Municipal Fire Management Plan
MFMP	Municipal Fire Management Planning Committee
MFPC	Municipal Fire Prevention Committee
Neighbourhood Safer Places (NSP-PLR)	A place of last resort for a person to be at during the passage of the fire front. They are a persons' backup plan, a place of last resort, if their personal bushfire survival plans cannot be implemented or have failed. NSP-PLRs do not exist in all communities.
Preparedness	All activities undertaken in advance of the occurrence of an incident to decrease the impact, extent and severity of the incident and to ensure more effective response
Recovery Centres	A location where people who have been affected by an emergency can obtain information concerning the recovery activities for the community and gain access to personal support and emergency recovery services. It is likely that this centre could operate for weeks or months following an emergency that has a significant effect on the community.

Relief Centres	A building or place established to provide life support and essential needs to persons affected by, or involved in the management of an emergency.
Response	Actions taken in anticipation of, during and immediately after an incident to ensure that its effects are minimized, and that people affected are given immediate relief and support
Recovery	The coordinated process of supporting emergency affected communities in reconstruction of the physical infrastructure and restoration of emotional, social, economic and physical wellbeing
RSFMPC	Regional Strategic Fire Management Planning Committee
SFMPC	State Fire Management Planning Committee
SRG	State Reference Group
Strategic Fuel Break	Is a break (fire & or fuel) constructed / maintained in a strategically useful location to provide an effective and safe means to undertake fire prevention or suppression activities in advance of a bushfire event occurring.
Stakeholders	Those people and organizations who may affect, to be affected by or perceive themselves to be affected by, a decision activity or risk
Safety Zone	Generally enlarged cleared areas that can be used with relative safety by firefighters and their equipment in the event of increased fire activity in the vicinity.
TPP	Township Protection Planning
TPF	Township Planning Factors
Traffic Management Point (TMP)	Restricted and varying levels of authorised access will be used to regulate the flow of road traffic into an area where fire has occurred is presently occurring or has the potential to occur
VFRR	Victorian Fire Risk Register is a systematic map based process that identifies assets, assesses assets and provides a range of treatments which contribute to the well being of communities and the environment, which suffer the adverse effects of bushfire

ANGLESEA

Local Emergency Planning Factors

2012-2013

Local Emergency Planning Factors

Trigger Point(s)

- A fire within or in close proximity to this township that has the potential to develop rapidly and will impact on the local community.
- A fire occurring adjacent to this location plan and may impact on the community described within this plan.

Township/Local Area Background

The Surf Coast Shire is the local government administering the township of Anglesea.

Environment

Anglesea is a coastal township surrounded by the Great Otway National Park. The township is divided by the Anglesea River and the Great Ocean Road. It encompasses the localities of Anglesea, Point Road Knight and the Alcoa Lease Area.

The terrain surrounding the township is undulating and the bushland ranges from coastal heath to low canopy coastal foothill forest. To the northwest of this town is a large open cut coal mine and power station. (Healthy Woodland).

Bushfire Risk

- The coalmine to the north west of the town provides an extensive forest fuel break that would assist in limited the speed and spread of a fire running into town from the North West.
- Significant fuel reduction burning and strategic break works in removing elevated fuel to the west of the township will provide assistance in reducing fire intensity.
- The fuel hazard is high to extreme and it is expected that a fire in this vicinity would be fast running and spread very quickly.

Fire History

On Ash Wednesday in February 1983, the fire ran into Anglesea on the south west wind change initially impacting the west of the town, however, severe spotting into the township caused significant damage and losses.

Local Support

Local brigade and Group Officers will be able to provide further knowledge when planning operational strategies.

Please note that circumstances at the time may require this plan to be amended.

This will occur at the discretion of the Incident Controller
