Hi Wendy

That's terrible news.

I would try this group, they look ideally placed to help:

<http://www.coeh.monash.org/ausfireftr.html>

You could also try Prof Lin Fritschi

http://healthsciences.curtin.edu.au/teaching/soph_people_list.cfm/Lin.Fritschi,

she has done work on leukaemia.

Regards,

Adrian

Hi Adrian,

I hope this finds you well, as you probably know by now the Hazelwood Mine Fire Inquiry has been reopened & that has a lot to do with your data that we had sent to the Inquiry & the pressure we have put on the Victorian Government.

I just wanted to ask you a question, if you can help or can direct it to someone who may know. A firefighter who worked on the face of the Hazelwood Mine Fire, the first few days of the fire without proper protection has been really sick, he has just been diagnosed with CML, chronic myeloid leukaemia. He is

wondering if this could have been caused by the Hazelwood Fire & what they were breathing. He claims that the levels of pollutants ect that they were reading in the mine even on the first days were off the charts but had to continue to work as they had to save the states power at all costs.

I would really appreciate your assistance on this as he is really concerned & believes it was caused from the fire, he was healthy before this fire.

Regards

Wendy
